

Planning statement supporting the application

The proposed three new window openings are situated on the first floor

2 - west side of the front elevation – North / 1 at the rear west facing South

The are purely to add more natural light to the respective bedrooms

At Present the sole opening/window is at the far end of the first floor front bedroom – These two openings give natural light to the bathroom extreme west side / centre of the Bedroom. At the rear of the barn the additional window gives more natural light to the rear bedroom.

They are directly above the approved Ground floor elevation and will not impede on any privacy to the adjacent Neighbouring properties. Additional natural light will lead to less reliance on electric lighting and reduced carbon.
