| Comments:                                                                                                                     | <p>The canopy of the tree is heavily biased to the north east due to shading from the woodland to the south and west. Dense ivy has colonised the canopy of the tree adding significant weight to its overall structure. In addition to the ivy, a north east facing branch from the adjacent Oak tree has grown over the top of T1 and is resting upon it. The whole mass of growth extends out over the boundary wall of the adjacent property 'Venesta'. Concerns have been raised over the structural integrity of the tree. The tree appears to be structurally sound with no significant visible structural or physiological defects aside of some large diameter (&gt;50mm) deadwood within its lower canopy and is currently considered to pose a broadly acceptable risk to users of the footpath that passes beneath it and to the adjacent boundary wall.</p> |
| Recommendations:                                                                                                              | <p>Whilst not necessary for safety reasons, a recommendation is made for the reduction of the canopy of T1 by pruning back its canopy (and that of the resting branch of the adjacent tree) by approximately four metres back to beyond the boundary wall of the adjacent property in order to alleviate any anxiety caused.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
