Description Of Work

Part 1

I can confirm that I have inspected the lime trees at your property. These trees are identified as JA-T15 on the Tree preservation order 1989.

All of these trees due to age of the have severe dieback. The dieback holes can be seen in the center of the trees. The trees have also been cut back by the neighbouring properties which have caused the trees to lose their natural balance which is causing heavily lopsided and dangerous. This is very dangerous. I suggest that urgent action is to rectify this due to the weakness of the branches and stability. These are a health and safety risk and using the outdoor space we recommend that the trees are reduced in size between 30-40 percent.
