I have made several attempts to make a comment on your online website but have not been able to do so, as the platform does not seem to operate.

I am therefore hoping that my comments within this email will be considered alongside online responses.

The proposed development of 725 homes within what is a relatively small village environment will not only be quite catastrophic for the natural wild life within the area, the infrastructure will be severely compromised. Assuming just two people lived in each of these homes (which is a very low estimate) then that would result in nearly 1500 people who will need both GP and dental practices. It is very difficult to get a GP appointment at the moment without an additional influx of residents. Furthermore the increase in traffic that will be caused will make the roads around the area even more dangerous and adding pollution. Wrotham Road is already far too busy and car drivers using short cuts through the lanes are already a menace. This is not a case in "Not my back yard" but a real concern not just for myself as an elderly resident of Meopham, but for the whole local community who will detrimentally affected by this proposal.
