	4 parcels of modified grassland present across most of the site. 1 parcel is located towards the centre of the site. The habitat has been assessed as in poor condition as it achieves the following criteria in the condition assessments: C. Some scattered scrub (including bramble <i>Rubus fruticosus</i> agg.) may be present, but scrub accounts for less than 20% of total grassland area. Note - patches of scrub with continuous (more than 90%) cover should be classified as the relevant scrub habitat type. F. Cover of bracken <i>Pteridium aquilinum</i> is less than 20%. G. There is an absence of invasive non-native plant species (as listed on Schedule 9 of WCA). The other three parcels have been assessed as in poor condition as they only achieve the following criteria in the condition assessments: Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough Council, the habitat isn't within a strategic site, hence strategic significance.

	Pond present in the east of the site. The habitat has been assessed as in poor condition as it achieves the following criteria in the condition assessments: C. Less than 10% of the water surface is covered with duckweed <i>Lemna</i> spp. or filamentous algae. D. The pond is not artificially connected to other waterbodies, e.g. agricultural ditches or artificial pipework. E. Pond water levels can fluctuate naturally throughout the year. No obvious artificial dams, pumps or pipework. F. There is an absence of listed non-native plant and animal species. G. The pond is not artificially stocked with fish. If the pond naturally contains fish, it is a native fish assemblage at low densities. Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough Council, the habitat isn't within a strategic site, hence strategic significance.
	Artificial; unvegetated land present towards the centre of the site. Condition assessments not required. Habitat deemed not strategically significant.
	Developed land present as roads and buildings on site. Condition assessments not required. Habitat deemed not strategically significant.
	Vegetated gardens present to the west. Condition assessments not required. Habitat deemed not strategically significant.

Broadleaved woodland located along the eastern boundary of the site. It has been assessed as in poor condition as it achieves a woodland score of 19 and meets the following criteria in the condition assessments:

- A. One age-class present.
- B. No significant browsing damage evident in woodland.
- C. No invasive species present in woodland.
- D. Two or less native tree or shrub species across woodland parcel.
- E. <50% of canopy trees and <50% of understory shrubs are native.
- F. <10% or >40% of woodland has areas of temporary open space. But if woodland <10ha has <10% temporary open space, please see Good category
- G. No classes or coppice regrowth present in woodland.
- H. 11% to 25% mortality and/or crown dieback or low-risk pest or disease present.
- I. No recognisable woodland NVC plant community at ground layer present.
- J. One or less storey across all survey plots.
- K. No veteran trees present in woodland.
- L. Less than 25% of all survey plots within the woodland parcel have deadwood, such as standing deadwood, large dead branches and or stems, stubs and stumps, or an abundance of small cavities.
- M. Less than 1 hectare in total of nutrient enrichment across woodland area and or less than 20% of woodland area has damaged ground

	1x large rural tree located along the eastern boundary of the site. It has been assessed as in good condition as it achieves the following criteria in the condition assessments: A. The tree is a native species (or at least 70% within the block are native species). B. The tree canopy is predominantly continuous, with gaps in canopy cover making up <10% of total area and no individual gap being >5 m wide (individual trees automatically pass this criterion). C. The tree is mature (or more than 50% within the block are mature). D. There is little or no evidence of an adverse impact on tree health by human activities (such as vandalism, herbicide or detrimental agricultural activity). And there is no current regular pruning regime, so the trees retain >75% of expected canopy for their age range and height. E. Natural ecological niches for vertebrates and invertebrates are present, such as presence of deadwood, cavities, ivy or loose bark. F. More than 20% of the tree canopy area is oversailing vegetation beneath. Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough Council, the habitat isn't within a strategic site, hence strategic significance.
	1x large rural tree located towards the east of the site. It has been assessed as in moderate condition as it achieves the following criteria in the condition assessments: A. The tree is a native species (or at least 70% within the block are native species). B. The tree canopy is predominantly continuous, with gaps in canopy cover making up <10% of total area and no individual gap being >5 m wide (individual trees automatically pass this criterion). C. The tree is mature (or more than 50% within the block are mature). E. Natural ecological niches for vertebrates and invertebrates are present, such as presence of deadwood, cavities, ivy or loose bark. Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough Council, the habitat isn't within a strategic site, hence strategic significance.

	2x small rural trees located towards the centre of the site. Each has been assessed as in poor condition as they achieve the following criteria in the condition assessments: A.The tree is a native species (or at least 70% within the block are native species). B.The tree canopy is predominantly continuous, with gaps in canopy cover making up <10% of total area and no individual gap being >5 m wide (individual trees automatically pass this criterion). Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough Council, the habitat isn't within a strategic site, hence strategic significance.
	x1 medium rural tree. The condition has been defaulted to moderate due to access. Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough Council, the habitat isn't within a strategic site, hence strategic significance.
	x1 small rural tree. The condition has been defaulted to moderate due to access. Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough Council, the habitat isn't within a strategic site, hence strategic significance.

0.68	Modified grassland to be created across the site. It is recommended to be sown with a N14F Flowering Lawn Mix or similar (see Naturescapes or similar). A poor condition has been assigned from the size/location/use of the habitat which may limit the habitat in achieving criteria in the condition assessment (including the first criterion, 6-8 vascular plants per m2, which is essential to achieving a moderate/good condition). Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough Council, the habitat isn't within a strategic site, hence strategic significance.
------	--

0.51	To be created in the north of the site adjacent to urban drainage scheme and where orchard planting is proposed. Recommended seeding with N5 Long season Meadow mix or similar (see Naturescapes or similar), would provide a visually attractive area as well as supporting native invertebrate species and providing foraging resource for local bats and birds. Planting should also include night scented plants such as evening primrose, night-scented catchfly, and night-scented stock to attract insects and encourage foraging bats. It is considered that the habitat can achieve a moderate condition by implementing a management plan to meet the following criteria in the condition assessment; A. The appearance and composition of the vegetation closely matches characteristics of the specific grassland habitat (this is essential to achieving a moderate/good condition); B. The sward height is varied (using a mowing regime to ensure at least 20% is >7cm and at least 20% is <7cm); C. Cover of bare ground is between 1% and 5%; D. Cover of bracken is less than 20% and cover of scrub is less than 5%; E. Combined cover of species indicative of suboptimal condition and physical damage
0.00	To be created across the site. Conditions default. Habitat deemed not strategically significant.

0.11	to be created in the north of the site. It is recommended the surrounding habitat is planted with N8F Water's Edge Flowers Mix or similar (see Naturescapes or similar). It is considered that the habitat can achieve a moderate condition by implementing a management plan to meet the following criteria in the condition assessment: B. The habitat parcel contains different plant species that are beneficial for wildlife, for example flowering species providing nectar sources for a range of invertebrates at different times of year; C. Invasive non-native plant species (as listed on Schedule 9 of WCA, 1981) and others which are to the detriment of native wildlife using professional judgement cover less than 5% (to achieve good condition, this criterion must be satisfied by a complete absence of invasive non-native species); E1. Plant species are mostly native. If non-native species are present, they should not be detrimental to the habitat or native wildlife; and, E2. The vegetation is comprised of plant species suited to wetland or riparian situations. Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough
0.71	To be created across the site. Conditions default. Habitat deemed not strategically significant.
0.08	7x trees to be planted to on site adjacent to developed land. A poor condition has been assigned due to the size/ location/use of the trees. Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough Council, the habitat isn't within a strategic site, hence strategic significance.

1.00	80x trees to be planted across the site. It is considered that the habitat can achieve a moderate condition by implementing a management plan to meet the following criteria in the condition assessment: A. The tree is native species; B. The tree canopy is predominantly continuous; D. There is little or no evidence of adverse impact on tree health; and, E. More than 20% of the tree canopy is oversailing vegetation beneath. The first step in the process of identifying the best person for the job is to determine what the organization needs. This involves understanding the current state of the organization, its goals, and the challenges it faces. Once the organization's needs are clear, the next step is to identify potential candidates. This can be done through various methods, such as reviewing resumes, conducting interviews, or reaching out to industry contacts. The third step is to evaluate the candidates against the organization's needs. This involves comparing their skills, experience, and qualifications to the requirements of the position. Finally, the organization must select the best candidate for the job.

0.00	0.00	Line of trees located along the eastern boundary of the site. It has been assessed as in moderate condition as it achieves the following criteria in the condition assessments: A.At least 70% of trees are native species. B.Tree canopy is predominantly continuous with gaps in canopy cover making up <10% of total area and no individual gap being >5 m wide. C.One or more trees has veteran features and or natural ecological niches for vertebrates and invertebrates, such as presence of standing and attached deadwood, cavities, ivy or loose bark. E.At least 95% of the trees are in a healthy condition (deadwood or veteran features valuable for wildlife are excluded from this). There is little or no evidence of an adverse impact on tree health by damage from livestock or wild animals, pests or diseases, or human activity. Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough Council, the habitat isn't within a strategic site, hence strategic significance.

0.04	0.16	2x native hedgerows located on site. Both have been assessed as in moderate condition. H1 is located along the western boundary of the site and achieves the following criteria in the condition assessments: A1. Height >1.5m average along length. A2. Width >1.5m average along length. B1. Gap - hedge base - Gap between ground and base of canopy <0.5 m for >90% of length B2. Gap - hedge canopy continuity - Gaps make up <10% of total length; and No canopy gaps >5 m D1. Invasive and neophyte species - >90% of the hedgerow and undisturbed ground is free of invasive non-native plant species (including those listed on Schedule 9 of WCA3) and recently introduced species. D2. Current damage - >90% of the hedgerow or undisturbed ground is free of damage caused by human activities. H2 is located towards the south of the site and achieves the following criteria in the condition assessments: A1. Height >1.5m average along length. A2. Width >1.5m average along length. B1. Gap - hedge base - Gap between ground and base of canopy <0.5 m for >90% of length B2. Gap - hedge canopy continuity - Gaps make up <10% of total length; and No canopy gaps >5 m D1. Invasive and neophyte species - >90% of the hedgerow and undisturbed ground is free of invasive non-native plant species (including those listed on Schedule 9 of WCA3) and recently introduced species
0.09	0.18	X2 native hedgerows (H3 & H4). Each hedgerows been assessed separately as poor. H3 achieves the following criteria: A1. Height >1.5m average along length. B2. Gap - hedge canopy continuity - Gaps make up <10% of total length; and No canopy gaps >5 m D1. Invasive and neophyte species - >90% of the hedgerow and undisturbed ground is free of invasive non-native plant species (including those listed on Schedule 9 of WCA3) and recently introduced species. H4 achieves the following criteria: D1. Invasive and neophyte species - >90% of the hedgerow and undisturbed ground is free of invasive non-native plant species (including those listed on Schedule 9 of WCA3) and recently introduced species. Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough Council, the habitat isn't within a strategic site, hence strategic significance.

Native hedgerow to be created along the northwestern and eastern boundary of the site. It is considered that the habitat can achieve a moderate condition by meetign the following criteria in the condition assessments: A1. Height >1.5m average along length. A2. Width >1.5m average along length. B1. Gap - hedge base - Gap between ground and base of canopy <0.5 m for >90% of length B2. Invasive and neophyte species - >90% of the hedgerow and undisturbed ground is free of invasive non-native plant species (including those listed on Schedule 9 of WCA3) and recently introduced species. D2. Current damage - >90% of the hedgerow or undisturbed ground is free of damage caused by human activities. Reviewing the Draft Local Nature Recovery Strategy for Kent and Medway and the local plans and policies for Gravesham Borough Council, the habitat isn't within a strategic site, hence strategic significance.
