Aurora PVC Centre Pivot Roof Window

This Aurora Roof Window is suitable for all applications in both domestic and commercial buildings. It can be installed on a variety of roof applications with a pitch range between 15° - 90° degrees and on common roofing materials with 0-50mm thickness using the [Universal Flashing Kit](#) or 16-120mm with the new [Large Tile Flashing Kit](#). It is advised to use an [Underfelt Foil Collar](#) to achieve a complete weather tight installation.

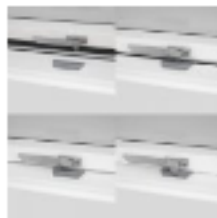

Please Note: The absence of an [Underfelt Foil Collar](#) or preferred roofing membrane can increase the risk of leaks and void the manufacturer's guarantee.

The Aurora PVC roof window is an excellent choice for the kitchen and bathroom, where dirt build up and humidity plays a significant role, while its modern white look will work perfectly in any room you need that care-free, easy to clean window.

Please Note: We advise that the size 114 x 112 cm should not be installed in roof pitches lower than 25 degrees.

Features & benefits:

- Toughened double glazing
- High quality sustainable materials
- Easy to install
- Suitable for roof pitches between 15°-90°
- Suitable with roofing materials between 0-120mm
- Next day delivery available
- 10 year manufacturers guarantee
