

Rendering will be carried out using the Duro lime green two coat system. Please see full specification in the link below. The top coat finish is self coloured and does not require lime wash paint to be applied.

Duro Lime Render Base Coat

Duro is a general-purpose lime render base coat that's both practical and eco-friendly.

Great for renovation, conservation or eco-friendly new builds, it offers superior levels of breathability - perfect for walls with damp or salt problems since water can evaporate easily and does not remain trapped where it can damage stone, brickwork and wood.

Duro lime render is also flexible and long-lasting, so it's more resilient to cracking or crazing compared with a standard render.

Duro lime render is completely free of cement, gypsum, acrylic, ash and Pulverised Fuel Ash (PFA), so is perfectly compatible with traditional building techniques.

Duro is applied as a standard render undercoat either by hand or machine and finished with Lime Green [Natural Finish](#) self coloured render.

Mixing Duro can be mixed in a drum mixer, a paddle mixer, or a suitable 3-phase mixer pump. Add the bag slowly to the mixer, carefully avoiding creating too much dust. Add approximately 4 ½ to 5 litres of water per bag. Mix for between 3 and 10 minutes. Duro may be re-tempered for up to 4 hours after being mixed. <https://www.lime-green.co.uk/Documents/Datasheets/Duro%20TDS.pdf>

Natural Finish External Lime Render

A pure lime finish coat render incorporating marble aggregates to give a durable and attractive appearance without compromising breathability. Available in a range of colours and textures.

Natural Finish is self-coloured external lime render requiring no further painting. Using a natural water repellent it protects against the worst of the elements while remaining breathable.

The external finish of walls is one of the first things you notice about a property, our lime based external render finishing coat combines special marble aggregates and hydraulic lime to give a beautiful top surface, whether you use Ultra or Duro as the base coat.

Natural Finish external render is the perfect complement to a sustainably built house, allowing you to bring an eco-friendly product right to the heart of a home.
