Introduction and historical context

South Hill Road lies in the outer area to the south of Gravesend town centre, and rises to the west of Parrock Road approaching the centre from the south. South Hill Road rises up a hill known as Windmill Hill, which is a local landmark, once having a windmill at its summit. The road forks at its halfway point and the subject property, No 53 South Hill Road, is the last house in a row of eleven terraced “two up, two down” houses built C1908 along the south side of the southwest fork of the road. The houses rise as a terrace up the hillside, from a point immediately adjacent to the west face of a pre-existing pair of semi-detached houses known as Ruby Villas, opposite the fork in the road. At the top end of the road before it meets Shrubbery Road and Sandy Bank Road, there is a terrace of four 4 storey houses known as Constitution Crescent, lying on the same side of the road as No 53, and being Grade II Listed as a group. The crescent is some 50 metres away and greatly elevated from the application property, and three post-war houses Nos 58, 59, and 60, are set between the two plots, rising with the land west of an unmade section of road at the top of Constitution Hill, south-west of and behind No 53. Photographs of the road, No 53, and Constitution Crescent are appended in Appendix B.

The Proposal approved on 9th October 2024

A previous application was submitted on 17th June 2022 under the reference 20220655, and approved. However, financial constraints have necessitated a lesser scheme to be implemented, requiring a resubmission for planning approval.

The existing slate roof to the rear single storey outhouse, rebuilt in the 1980s, is to be removed, replaced by the construction of a first floor rear extension over the existing ground floor of the outhouse, following the existing footprint. Within this space at ground floor an open-plan living/eating and kitchen area will be formed with bi-fold doors to the rear garden, and the existing ground floor of the house replanned to create a cloakroom, the existing stairs, and the front room as a study. On the first floor the existing front bedroom will remain, and the existing rear bedroom will be replanned as a bathroom and access to a new larger bedroom in the extension. The existing party/boundary wall to No 52 will remain, and a new 225 solid brick faced wall will be built along the line of the existing ground floor wall, to form the first floor, with a window formed to the side. A second window will be added to the wall at ground floor in place of the existing rear door. The whole of the new build will be in London yellow stock facing bricks and replicating the red stock ribbon stretcher courses, and voussoir arches to windows and doors, with natural slates to the new duo pitch hipped roof, as used on the existing outhouse roof.

The proposed windows and doors will be white UPVC double glazed units to match the existing, with fenestration proportions being sympathetic to vertical sash timber windows. That said, consideration is being given to timber vertical sash windows to replace the existing UPVC units, and to be fitted in the new extension, all subject to the likely cost involved.

The existing concrete post and timber panel fence along the Constitution Hill and the rear access alleyway boundaries will remain.

A teacher at a local state school in Gravesend, the applicant, has been a resident at 53 South Hill Road for some years and wishes to continue living there. However, the accommodation has not been sympathetic to recuperation following three major operations after contracting cancer. For practical purposes the existing staircase is very steep, and negotiation backwards has been necessary to reach the ground floor bathroom during the night, and on occasion in the day, with personal drains in the bedroom upstairs. Also, on one occasion the sofa downstairs was required as a bed rather than trying to go upstairs to bed; hence a desire for a bathroom upstairs.

There is a need to provide more space for working from home and living space to allow for use of the second bedroom as a bedroom rather than as an office with desk and teaching online from home. Looking to the future there is also likely to be a need to provide facility for an aging parent.

As noted, it is wished to provide a more authentic heritage frontage and side façade, reinstating vertical sash windows and replacing the 1980s rear extension and UPVC windows with a more sympathetic design.

Character and appearance

Considering the block of houses, being Ruby Villas and the eleven houses in the terrace, these are typical of housing being built at the time. Two-storeys, with single storey rear washhouses and lavatories under mono-pitch roofs, and built in London yellow stock bricks under main duo-pitch slate roofs. The villas, as a pair of semi-detached houses, still have the original brick detailing using red stock brick voussoir arches to their windows and doors, and in double and triple string course banding across the width of the road elevations, with a single string course topped by a dog-tooth course at the eaves. There is also a central feature in the form of a diamond shape linking the villa façades as one.

Of the eleven houses in the adjacent terrace only No 53 retains its original brick façades like that of the villas, with red brick arches and several single red brick string courses, which, as they meet No 52, step down with the ground levels to, in all probability, continue across the lower face of the next house, repeating at each house until the villas are reached to close the vista. This feature would have linked all the houses in the terrace had it remained, but unfortunately this was not to be. Of the eleven houses, ten have had the brickwork covered over, nine by render and pebble dash and one by painting. Of the nine rendered and dashed, two remain unpainted while the remainder have been painted in various pastel colours. While these do present a relatively attractive setting along the street, they are not as originally built, demonstrated by Ruby Villas and No 53.

Generally, windows and doors would have been timber, the windows vertical sash, however, only four terrace houses retain timber sashes of which only one may be original. Otherwise, all the other houses have various types of UPVC windows including the villas and No 53. Most front doors remain in timber, very few if any original, with only two having UPVC doors fitted.

Significance

No 53 South Hill Road has some significance in that it is the only end of terrace property, with a slightly wider frontage to the road, and retains the original external appearance in the fairfaced and decorative brickwork described, replicating the earlier Ruby Villas and thus closing the run of terrace. The property has no front door to the street, the two windows facing the street are aligned one above the other, not staggered as in the other houses, and the front door is placed at the side in the double fronted west elevation. The original slate roof to the house has gone, replaced by concrete interlocking tiles, although the rear outhouse still has a slate covering. With a truncated triangular plot and nominally twice as much road frontage as others in the terrace, there is sufficient area at the west side for amenity space as well as a back garden; the front area of the side space is currently used for parking one car, and will be retained as such. The aging timber panel/concrete post fence to the west and south boundaries separates the property from the unmaintained unkempt upper access to Constitution Hill, and the motley assortment of back yard areas visible to the east along the terrace back access alleyway.

Statutory Obligations and relevant Policies

The whole of South Hill Road and other roads in the area west of Parrock Road lie in a Conservation Area, so designated in July 1975, extended in April 1991, and again in February 2001, with an Article 4 Direction applied in September 2007. These restrictions mean generally, that any proposed work to a property within the designated areas requires planning permission before it can be done.

The National Planning Policy Framework requires that any planning application affecting a historic asset should be accompanied by a statement of the asset's significance and any contribution made by its setting.

Gravesham Local Plan Core Strategy policies CS19 Development and Design Principles, and CS20 Heritage and the Historic Environment, are also relevant to how an application is considered and determined, especially in special areas that are protected.

Legislation relating to conservation areas is contained in the Planning (Listed Buildings and Conservation Areas) Act 1990. The section applicable in this case is Section 72 of the Act, and in relation to conservation areas states: "In the exercise, with respect to any buildings or other land in a conservation area ... special attention shall be paid to the desirability of preserving or enhancing the character or appearance of that area." Decision makers have a statutory duty to ensure that the special interest of listed buildings or conservation areas is properly taken into account when determining applications affecting their special interest, or the setting of listed buildings.

The purpose of the conservation and Article 4 designations, as well as the statutory and local government policies is not to stifle change, but to manage it to maintain preservation and enhancement of a special area's character, appearance, and heritage value.

Planning History

A schedule of most planning applications made in the locality is appended as Appendix A, taken from the Gravesham website, for years 1977 to 2021, and showing the variety of proposals including requests for installation/retention of UPVC windows replacing timber sash windows. Despite most of the terrace Nos 42 to 53 having UPVC windows there do not appear to be corresponding permissions granted for most, and in 2019 No 44 was granted permission to retain UPVC windows and front door, while No 45 was refused permission to retain UPVC windows and front door, even at appeal; there appears to be no recorded history for No 53.

Given that plastic windows and doors are alien to the conservation of the locality, it is unclear why a number have been permitted, and others simply tolerated, even after the Article 4 designation, and the option for the council to seek reversal of unsympathetic alterations under their Management Plan – Gravesend's 19th Century Suburban Conservation Areas 2009.

Impact of the proposal on the property's significance, level of harm, and mitigation

The proposed extension, sited to the rear of the existing house, absorbs the space currently occupied by the rear outhouse only. Being two storeys in height the proposal will add some greater bulk to the volume of the outhouse, which has a steep mono-pitch roof as it stands, however, it does not extend further back than the outhouse, so retaining the existing rear garden area.

In terms of harm, the proposal will change the rear elevation of the house and the outhouse in its entirety, and to a limited extent the west side wall. Also, the setting will be altered from some western viewpoints in that the vista along the backs of the houses will be less on view.

In mitigation the proposal is set well back from the principal road frontage, designed in sympathetic style to the existing house, and sited to form a natural courtyard to the house entry. External materials will replicate those of the existing walls and roof, and decorative brick details, and window arches repeated. The roof line of the extension will be lower than, and subordinate to, the existing house roof, and the outhouse wall bordering No 52 will be retained at the same overall height, with a pitched roof rising back to the extension ridge and hip at its south end. There is already a precedent for two and three storeys rear/side extensions along the street, for example Nos 25 and 26, and as noted UPVC windows and doors feature heavily in the street scene, along with pebbledash and painted walls. However, as mentioned the applicant is considering the use of timber vertical sash units, including replacement of those in the existing house, subject to cost.

From all viewpoints the property will still retain its significance as the end of terrace, with its original brickwork intact, and enhanced by a more attractive frontage and courtyard area.

Conclusion

The applicant needs more and better laid out space for practical living, and wishes to stay in place. The proposal answers that wish while preserving the essence of the existing house and improving the external setting. It is in keeping with the surrounding area and is not detrimental to other historic buildings, for example Constitution Crescent, as noted considerably elevated and some distance from the property, with 1950s housing intervening.

Addendum Historical Statement

Subsequent to the approval of the revised planning application reference 20240768, submitted on 21st August 2024 and approved on 9th October 2024.

Following revisions to the original scheme proposals for the extension to 53 South Hill Road, resulting in the approved lesser scheme noted, because of financial constraints, the applicant wishes to maximise what space is available as far as their limited budget will allow.

To this end it is proposed to add an Orangery to the western side of the property, being single storey and with access from the kitchen/living room. The additional space will extend to the inner face of the existing fence at the boundary to Constituent Hill to the west, with solid wall construction finished with painted smooth render, return walls to north and south closing to full light oak framed glazing to the front, and light oak framed French doors to the rear south elevation. The whole space will be covered by a flat roof to falls, with a central rectangular pitched, hipped glazed roof light in light oak. The perimeter will be finished with a light oak cornice and parapet wall to the west side. The front planter and rear patio will have minor alterations to accommodate the new space.

The proposal will be entirely subordinate to the main approved scheme and the materials proposed will reflect this, the whole not detracting from the prominence of the house itself within the Conservation Area.

C

Addendum Historical Statement to the revised planning application reference 20240768 submitted on 21st August 2024 and approved on 9th October 2024.

Following revisions to the original scheme proposals for the extension to 53 South Hill Road, resulting in the approved lesser scheme noted, in view of financial constraints, the applicant wishes to maximise what space is available as far as their limited budget will allow.

To this end it is proposed to add an orangery to the western side of the property, being single storey and with access from the kitchen/living room. The additional space will extend to the inner face of the existing fence at the boundary to Constituent Hill to the west, with solid wall construction finished with painted smooth render, return walls to north and south closing to full light oak framed glazing to the front, and light oak framed French doors to the rear south elevation. The whole space will be covered by a flat roof to falls, with a central rectangular pitched, hipped glazed roof light in light oak. The perimeter will be finished with a light oak cornice and parapet wall to the west side. The front planter and rear patio will have minor alterations to accommodate the new space.

The proposal will be entirely subordinate to the main approved scheme and the materials proposed will reflect this, the whole not detracting from the prominence of the house itself within the Conservation Area.
