

1. Validity Period

These prices are valid for a period of 30 days from the date of quotation. E&oe.

2. Site Details

For quotations that include installation our quotation is based on: a flat, level, soft earth site that is free of stones and debris, if safety grass mats are included then the sites needs to be that of well-maintained grass; that there is unrestricted access to site for HGV's; the assumption that underground conditions which cannot easily be identified during the site survey do not impede the construction works detailed. Should unexpected underground conditions be encountered further works may be required at an additional cost.

If the ground conditions necessitate the provision of temporary roads/tracks, additional costs may apply.

3. Drainage

Our quotation, unless otherwise stated, is based on the site being a free draining site. If drainage has been included this will be a French drain soakaway system that has been used successfully for decades on many play areas. Wicksteed are not drainage experts and can take no responsibility for the success of any drainage installed, however, should your knowledge of the area indicate that drainage is required and that the French drain may not be suitable then please advise us as we may need to refer you to a drainage expert.

4. Grass Re-Instatement

Our standard grass reinstatement is carried out by adding top soil and reseeding.

5. Security Fencing

Unless security fencing is included within the quotation, when left unsupervised the site will be cordoned off with Euromesh - i.e. 1m high, durable orange plastic barrier fencing, supported with wooden stakes.

6. Safety Surfacing and Paths

For quotations that include safety surfacing and/or paths please refer to the appropriate product data sheets for important information relating to these items.

7. Lead Time

At Wicksteed we are striving to continue to deliver the standards of service that our loyal customer base is used to receiving. Unfortunately in these unprecedented times the company is unable to predict circumstances outside of our control precipitated by the Covid-19 pandemic such as increased government regulation and employee periods of mandatory isolation together with nationwide supply chain issues of raw materials.

It is the responsibility of Wicksteed to ensure that our employees and the general public are at all times being kept as safe as possible and this combined with the supply chain issues may result in delays. If you entrust Wicksteed with your project we will of course keep you informed throughout your works on the current situation and are always here to help with any queries that you may have.

As a result of these nationwide issues our lead-times will be advised at point of order to enable us to provide you with the most accurate information that we are able to.

8. Guarantee

For full details please refer to the Wicksteed Guarantee certificate. The guarantees only apply to products manufactured by Wicksteed Leisure Ltd. In cases where items have been sourced from alternative manufacturers our guarantees will not apply and will be that of the manufacturer of the product and will be subject to their terms and conditions.

WETPOUR

Playground Wet Pour is suitable for all installations where safety surfacing is a requirement. Up to the appropriate Free Fall Height, it can be used around complex configurations of playground equipment and ground contours. It is slip resistant and non-abrasive to young limbs.

NOTE: This is an engineered base which creates a uniform level.

UP TO 20MM THICK

40MM THICK AND OVER

ONTO EXISTING SURFACE

- 100MM X 50MM DEEP CHASE CUT NEEDED
- 30MM DIA. DRAINAGE HOLES BACKFILLED WITH PEA SHINGLE

ECOTUMBLE

Ecotumble is manufactured from shredded recycled tyres which are then colour coated and combined on site with a binding agent. It provides a more natural look in comparison to other rubber synthetic surfaces. It is laid onto the existing grass/soil surfaces without an engineered base. It is a colour coated system and as such the colour will wear off over a period of time that may result in carbon blacking occurring.

NOTE: There is a minimum of 40mm depth to ensure adhesion. Please advise if the site is liable to flooding or is exposed to a high water table as this will allow us to re-evaluate our proposal.

40MM THICKNESS

50MM THICKNESS

60MM THICKNESS

70MM THICKNESS

95MM THICKNESS

SAFETY GRASS

Playground Safety Grass is a honeycomb matting that's installed onto grass to provide grass retention and improve impact-absorbing protection. It's easy to install, competitively priced and unobtrusive. Once installed it virtually disappears as the turf grows through its cells, whilst continuing to provide impact-absorbing protection. Both wheelchair and pushchair friendly Playground Safety Grass can also be used for high-wearing walkways across grass to protect against erosion.

NOTE: When laid it will follow the natural contours of the ground and fluctuations to the sub base. If the area is known to be either wet or boggy you should ensure that grass has taken prior to allowing the areas to be used. As the grass sub base plays an important part in the absorption of any impact it is important that the turf and top soil are maintained in good condition to ensure that the surface performs as intended.

23MM THICKNESS
