

Hi Lisa,

Apologies for the delay in getting back to you with further information. I have received the below from the applicant:

“For normal operation the expected emission rates to air are:

Hydrogen: 0.13kg/h
Oxygen: 2007 kg/h
Nitrogen: 24.19kg/h

These are just estimates based on predicted running of the electrolyser. The storage volumes remain below 2 tonnes so below the HSC consent level.”

I hope this is sufficient?

Many thanks,

Becky Little (She/Her)
