

14th April 2025

Glide Fibre – at The Charter

Glide will be installing a single-mode fibre backbone infrastructure across Heritage Quarter blocks E01, E02, and E03. This installation will include 4-core single-mode fibre connectivity between the main communications room of each block and the individual apartments.

Within each apartment, the fibre will be terminated in the service cupboard and housed in a wall-mounted home hub enclosure.

The site-wide fibre infrastructure will follow a star topology, with the main core communications room located in block E01. From there, single-mode fibre backbone links will be routed through the external duct system to the communications rooms in the remaining blocks.

This infrastructure will provide the appointed internet service provider with direct connectivity to each apartment on the site.

All passive cabling will be fully installed and tested prior to resident occupation.

Please let me know if you have any questions or if further clarification is needed.

Kind regards

Jon Taylor
