The Proposal

In order to futureproof the living in the house, the applicant and family house needs to be extended to accommodate their two adult children and their current needs.

The application is for the demolition of the rear single storey conservatory. The proposal is for a two storey rear extension with the ground floor extending as far as the existing conservatory but to the full width of the house. On the first floor the rear extension takes into account potential overshadowing the bedroom of no.19.

The proposed rear ground and first floor extension will create a deep plan:

- Extension and internal alterations to the ground floor replaces the existing conservatory with a snug/lounge area and a dining room. Creating a new internal access to the garage through the front hallway and repositioning the door from the lounge to the kitchen.
- Increasing the area of the smaller existing bedrooms to create three equally sized bedrooms, a new bathroom and storage space.
-

Background and Rationale

The existing home was built in the 1980s as part of a large homing development for 22 detached homes for McLean Homes South East. The current owners have lived in the house from when it has been first built as a 4 bedroom house with 1 bathroom and downstairs toilet.

No.20 Brooke Drive, has a rear extension of a similar length.

We believe that the proposals will have little to no impact on the amenity and privacy of neighbouring properties and will augment the existing house with pleasant and generous spaces for contemporary living.

Planning History

There has no planning history on 18 Brooke Drive, except the McLean's housing development.

Refer to page 7 for original planning application for the development.

Summary and Conclusion

Materials

The following materials are proposed for the extension and alterations:

- The new roofs will be tiled to match the existing roof and ridge tiles.
- The new rear extension will match the bricks to the main house.
- New external doors to be powdered coated double glazed aluminium.
- New windows to be powdered coated aluminium or composite double glazed

Summary and Conclusion

- The proposal will have little to no impact on the amenity and privacy of neighbouring properties and will augment the existing house with pleasant and generous spaces for contemporary living.
- There is recent precedence for similar extensions obtaining planning approval on the same street.
- We trust that the information submitted is in order and ask that the Local Authority grant planning permission for the proposed extension.
