PROPOSAL:

We are proposing to extend the already built rear extension from 3.5 meters to 4.8 meters which will connect to the garage via a linked brick built construction with doors and windows. The existing garage will be converted to a habitable room built under the PD. We are also planning to build a larger front porch as shown on the plans.

We append the application with a building plan, PE1417, Site and Block plans.

The Site and its surroundings:

The property is an established semi detached house with a large garden in a typical side street amongst mixed semi and other detached properties. No trees will be removed.

Design Statement Use:

The proposed side extension will greatly enhance the residential use of the property providing a larger dining / kitchen area with the garage conversion for the occupiers elderly mother, who they are currently looking after.

Appearance:

There will be changes to the front elevation by way of a larger porch built with closely matching brickwork the new proposed extension will also be built with closely matching brick work.

Access:

There will be no changes to the already easy access to the rear.

Conclusion:

The overall proposed works in my opinion will not affect the area as seen from the front elevation being that there are several larger porches already built, the additional living accommodation gained will make it into a spacious family home especially having the garage conversion to house the occupants mother.

APPLYING FOR PLANNING PERMISSION

For rear extension and front porch.
