

## Solar Glare

There are no quantitative criteria within the BRE Guidelines or elsewhere regarding acceptable levels of solar glare. Generally, however, solar reflections at high altitudes are less likely to cause nuisance or distraction as one has to look upwards to see it.

Professional judgement has therefore been applied to assign the significance of solar glare arising from the proposed Development and to determine the criteria for assessing the significance of solar glare.

Multiple viewpoints may be chosen for each of the traffic lanes, train line or signals affected. In terms of significance criteria however, professional judgement has been used to determine the effect at the location rather than the individual perspectives at a signal traffic junction. Factors that could influence the significance of effect may include:

- sunlight availability probability;
- area of façade off which reflections are visible;
- period of time reflections are visible;
- angle at which reflections are visible from line of sight;
- views of the development being obscured for example by trees; and
- the time of day at which the solar reflection will occur for example during peak traffic times.

Initially, the following guide will be used to ascertain the possible significance for each view and the factors listed above will then be taken into consideration to determine the overall significance for the designated viewpoint.

Table 4 Criteria Used for Determining the Effect of Solar Glare

| Scale of Effect                                                                                                                                                                    | Possible factors                                                                                                                                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Negligible                                                                                                                                                                         | No reflections are visible or if visible all occur at angles greater than 30° from the driver's line of sight and so, as stated by the CIE, will be of "little significance" |
| Minor                                                                                                                                                                              | Solar reflections are visible within 30° to 10° or between 10° to 5° of the driver's line of sight for a short period of time                                                |
| Moderate                                                                                                                                                                           | Solar reflections are visible within 10° and 5° of the driver's line of sight occurring for a long period of time.                                                           |
| Major                                                                                                                                                                              | Solar reflections are visible within 5° of a driver's line of sight.                                                                                                         |
| Note – mitigating factors such as alternative and unaffected signals/traffic lights and car visor angle may result in the assignment of significance which differs from the above. |                                                                                                                                                                              |

## Light Pollution

Given the outline nature of this application and resultant lack of detailed information available to enable a quantitative technical assessment, light pollution has been qualitatively considered within this ES in relation to the maximum parameters using professional judgement. Receptors

where there is the potential for significant effects have been identified, and where necessary, these will be fully assessed at the RMA stage once the relevant detailed information is known. Within this ES chapter, all receptors/locations where there is the potential for significant impacts have been identified and assigned a range of scales for the potential effects.

The below Table sets out the environmental zones as per the ILP Guidance which have been applied in this assessment.

Table 5ILP Light Pollution Criteria for Environmental Zones

| Environmental Zone                                                                            | Sky Glow ULR (Max %) (1) | Light Intrusion (Into Windows) Ev (Lux) (2) |             | Luminaire Intensity (Candelas) (3) |             | Building Luminance Pre-Curfew (4) |
|-----------------------------------------------------------------------------------------------|--------------------------|---------------------------------------------|-------------|------------------------------------|-------------|-----------------------------------|
|                                                                                               |                          | Pre-Curfew                                  | Post-Curfew | Pre-Curfew                         | Post-Curfew | Average L[Cd/M2]                  |
| E0 – Dark areas (e.g. UNESCO Starlight Reserves, IDA Dark Sky Parks)                          | 0                        | 0                                           | 0           | 0                                  | 0           | 0                                 |
| E1- Intrinsically dark areas (e.g. National Parks, areas of outstanding natural beauty)       | 0                        | 2                                           | 0 (1*)      | 2,500                              | 0           | 0                                 |
| E2- Low district brightness (e.g. rural or small village locations)                           | 2.5                      | 5                                           | 1           | 7,500                              | 500         | 5                                 |
| E3- Medium district brightness (e.g. small town centres or urban locations)                   | 5.0                      | 10                                          | 2           | 10,000                             | 1,000       | 10                                |
| E4- High district brightness (e.g. town/city centres with high levels of night time activity) | 15.0                     | 2                                           | 5           | 25,000                             | 2,500       | 25                                |

Notes:

ULR = Upward Light Ratio of the Installation is the maximum permitted percentage of luminaire flux for the total installation that goes directly into the sky

Ev = Vertical Illuminance in Lux and is measure flat on the glazing at the centre of the window

I = Light Intensity in Cd L = Luminance in Cd/m2 Curfew = The time after which stricter requirements (for the control of obtrusive light) will apply; often a condition of use of lighting applied by the planning authority. If not otherwise stated – 23.00 hrs is suggested.

\* = From Public road lighting installations only.

With reference to the table above, taken from the ILP guidance, the Site is classified as environmental zone E4. This zone allows for a maximum pre-curfew light intrusion level of 25 lux and a maximum post-curfew light intrusion level of 5 lux.
