Application Summary

Address: Nuralite Industrial Estate Canal Road Higham Rochester Kent ME3 7JA

Proposal: Application for removal of condition 4 ,6,12 and variation of condition 7 attached to 20190290 - The proposal is for the systematic redevelopment of the existing Nuralite site. This includes the importation of inert materials to cap, and landscape the historic asbestos landfill, thus containing its contamination risk. To demolish the existing buildings of the Nuralite industrial estate, deal with existing contamination, both through capping and removal of areas of hydrocarbon pollution, the laying of new service and utility infrastructure and the construction of 11 new purpose built light industrial type units and a site office; to allow removal of passing places, temporary traffic controls, Archaeological works and implementation of a permanent TRO for all traffic.

Case Officer: Mr Richard Hart

Stance: Customer objects to the Planning Application

Reasons for comment:

Comments: Dear sir or madam,
I fully object to the planning application under the grounds of too much heavy traffic already in the area causing damage to Cars and property. We constantly have issues with the passing lorries hitting our cars, 12 times now my car has been damaged over the last few years as there is no room on the small roads. There are more cars than ever travelling in this direction due to closure of local doctors. And in the future with the new Thames Crossing people will use this as a cut through and no doubt double the traffic again.
The the lorries are slowly damaging the road surfaces which are now taken a toll on our wheels. This is also a very popular bicycle route with organised races. There are also big concerns with the asbestos in the area not only on the site but in the surrounding fields and even the canals we have been told they used to dump it.
