Dear Lisa

20260258 - Premier Inn Hever Court Road Gravesend Kent DA12 UQ

NHS Kent and Medway Integrated Care Board (ICB) is the NHS organisation that plans and buys healthcare services to meet the needs of 2 million people living in Kent and Medway. It is our responsibility to assess the healthcare infrastructure impacts for all proposed developments.

This letter provides a response to the above application which concerns up to 30 residential dwellings.

We set out in the [NHS Kent and Medway Developers Contributions Guide](#), how the ICB uses the SidM health tool to analyse planning applications to understand the population demand arising from the new housing units. Our assessment uses the information within the application, namely the creation of 30 studio rooms for rent on at least six month tenancy agreements. The application states that the intention is to operate as a stable residential environment rather than short-stay accommodation.

In line with the Planning Act 2008 and the Community Infrastructure Levy Regulations 2010 (the CIL Regulations) (Regulation 122) requests for planning obligations must comply with the three specific legal tests:

1. Necessary
2. Related to the development
3. Reasonably related in scale and kind

We have applied these tests in relation to this planning application and can confirm the following specific requirements.

Primary and Community Care contribution	Population	Required obligation (Wording for S106 agreement)
£26,608 Index Linked	34 population (with gain factor applied)	it is requested the contribution be towards refurbishment, reconfiguration and or extension to general practices that cover the development and other healthcare facilities within a 3 mile radius of the development site or towards new healthcare facility to be provided in the community in line with the healthcare infrastructure strategy for the area. To allow the contribution to be used towards professional fees associated with feasibility or development work for existing or new premises projects. To enable proactive development and delivery of a project the trigger of any healthcare contribution should be linked to commencement or an early stage of development, with the funding being available in full and not provided in phases.

Justification for infrastructure development contributions request

The proposed development will increase demand on primary and community healthcare services provided to the local population. The proposed development currently falls within the general practice boundaries of Swanscombe Health Centre, Springhead Health, and Rochester Road Surgery

The ICB Estates Strategy and area-based estates plans and priorities will continue to change and evolve as strategic assessments continue to be undertaken for an area informed by changes to healthcare provision, national policies and guidance and council local plans. However, the need from this development, along with other new developments, will need to be met through the creation of additional capacity in primary and community care facilities.

Whilst it is not possible at this time to set out a specific premises project for this contribution, we can confirm that, based on the current coverage of health care services and location of this

Letter reference: ICB response 2026/0258

application, we would expect the contribution to be utilised as set out above. Any premises plans will include the pooling of S106 contributions where appropriate.

I would be grateful if you could advise me of the Council's decision in due course. In the meantime, should you require any further information or points of clarification please contact me using the above email address.

Yours sincerely
