

Proposed lighting  
LED luminaires, lower intensity, good colour rendition and dimming capability;  
A warm white spectrum (<2700Kelvin) to reduce blue light component;  
Luminaires should feature peak wavelengths higher than 550nm to avoid the component of light most disturbing to bats;  
Upward light ratio of 0% and with good optical control should be used;  
Luminaires should always be mounted on the horizontal, i.e., no upward tilt; and  
Any external security lighting should be set on motion-sensors and short (1 min) timers.
