

With you in every moment of life ...

Respond Construction was founded in London in 2005 by Recep Türkmen and Mustafa Kaya. It continues to serve mainly in European countries such as England and Germany. Although it was established for a short time, it quickly expanded its customer portfolio in the market. He did this by not compromising on quality and workmanship in his work, delivering the work on time and standing behind his work. Respond Construction has become a trustworthy brand with its professional working approach with its experienced staff. It has always renewed itself by following the technology closely. It has been open to radical designs without staying within certain patterns. It always keeps its team and equipment ready to provide better service to our customers.

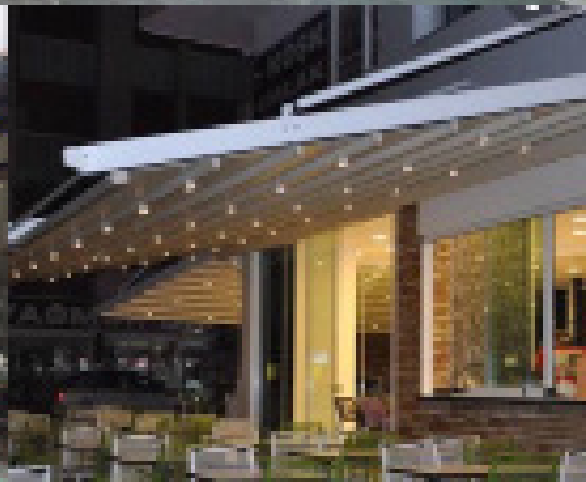

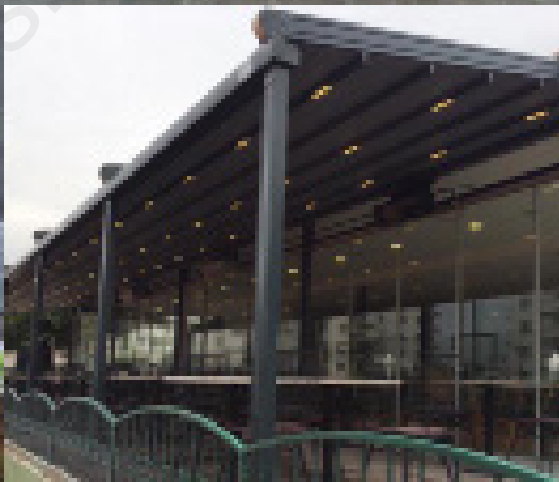

What are Tent and Awning Systems?

To protect a certain area from sun rain and environmental pollution. While protecting these areas, stylish, easy use and purposeful use are taken into consideration. These systems are preferred in usage areas because they are long-lasting, can withstand all kinds of weather conditions, give a beautiful and elegant appearance to the applied environment, are economical and have multiple color choices.

Rail pergole systems are both functional and stylish systems. They are effective in maintaining balance at ambient temperature, providing energy conservation and protecting indoor furniture from the harmful effects of the sun. They also add color and aesthetics to the space decor. They are usually motorized systems and controlled by remote control.

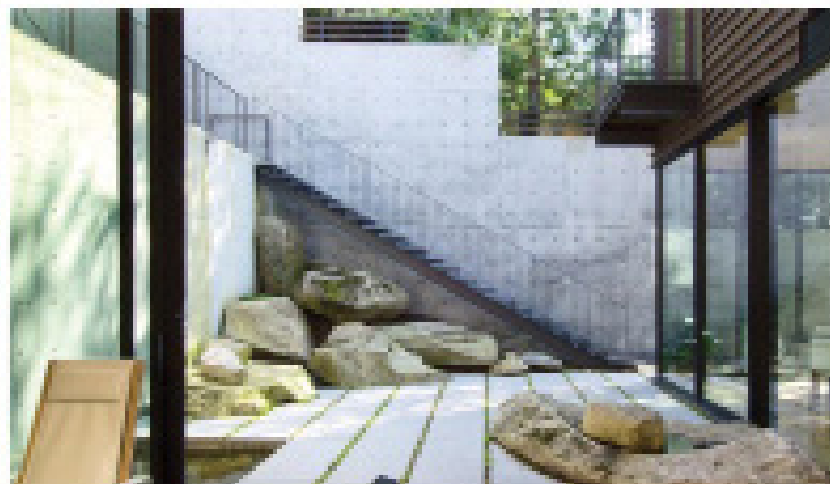

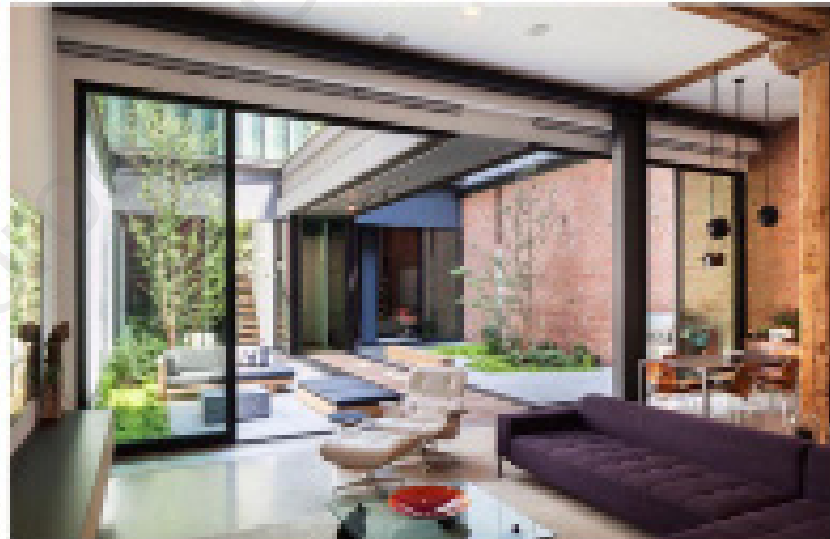

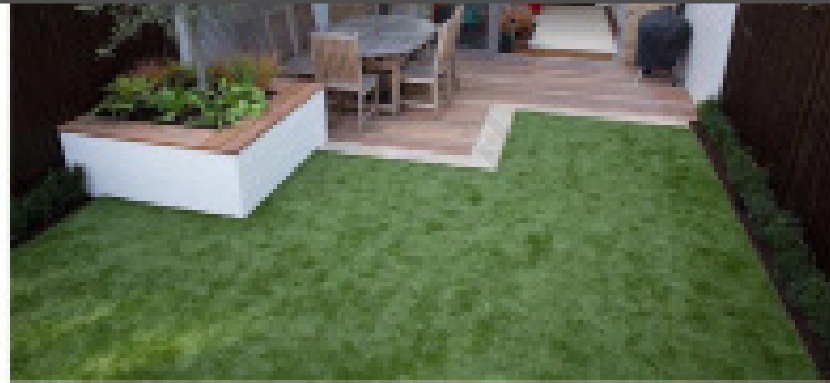

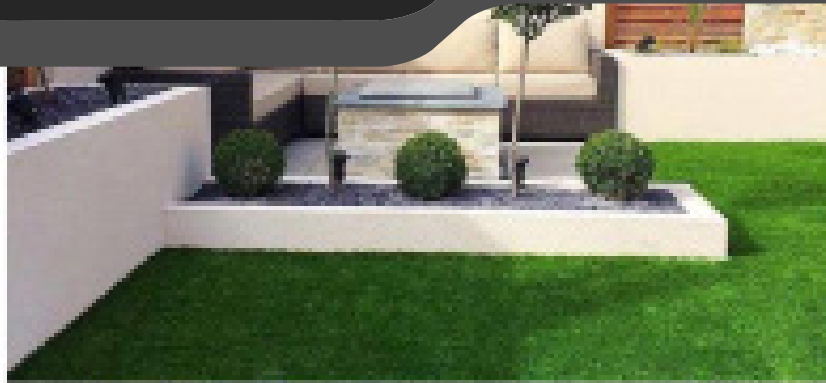

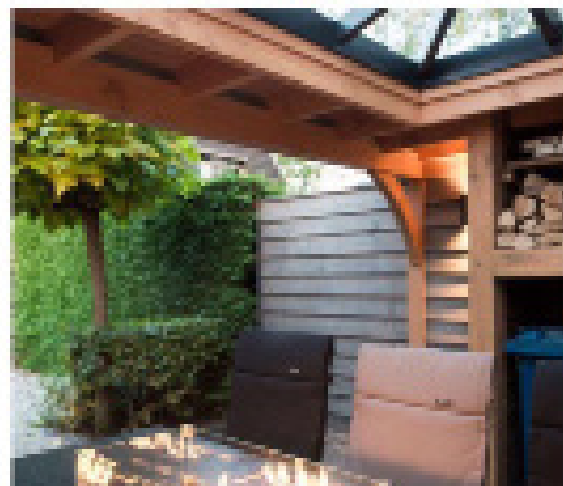

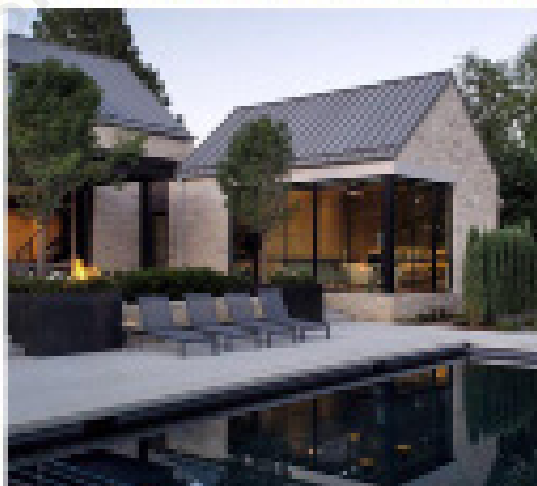

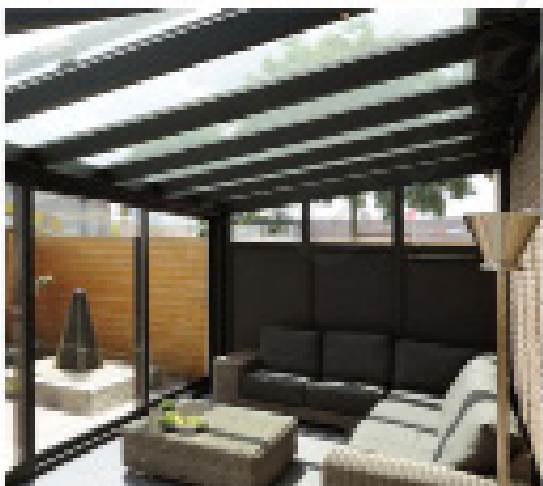

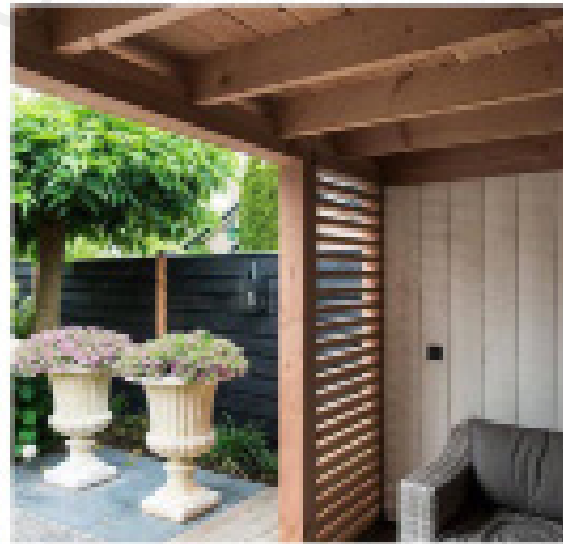

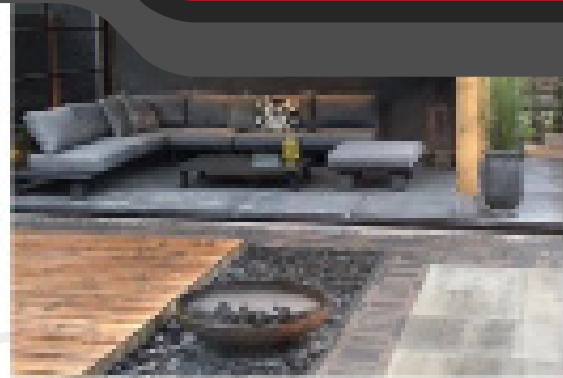

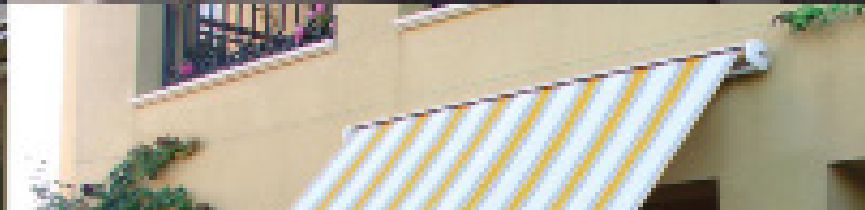

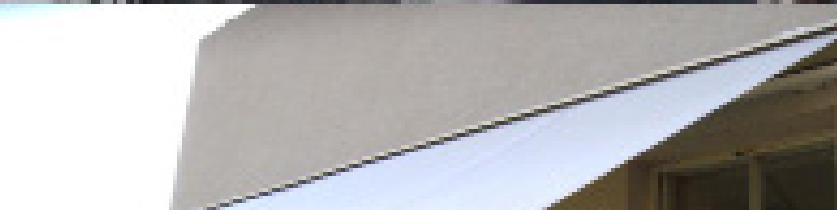

Guillotine glass systems are automatically glass panels with unique vertical working feature. Guillotine glass systems are used as doors in places where there is passage, and as a window or glass railing in the space. The guillotine glass system is modified in accordance with its intended use. The glass-glass feature and profile options used meet the heat insulation expectations at a high level. Guillotine glass system carrier materials provide high level of safety and security.

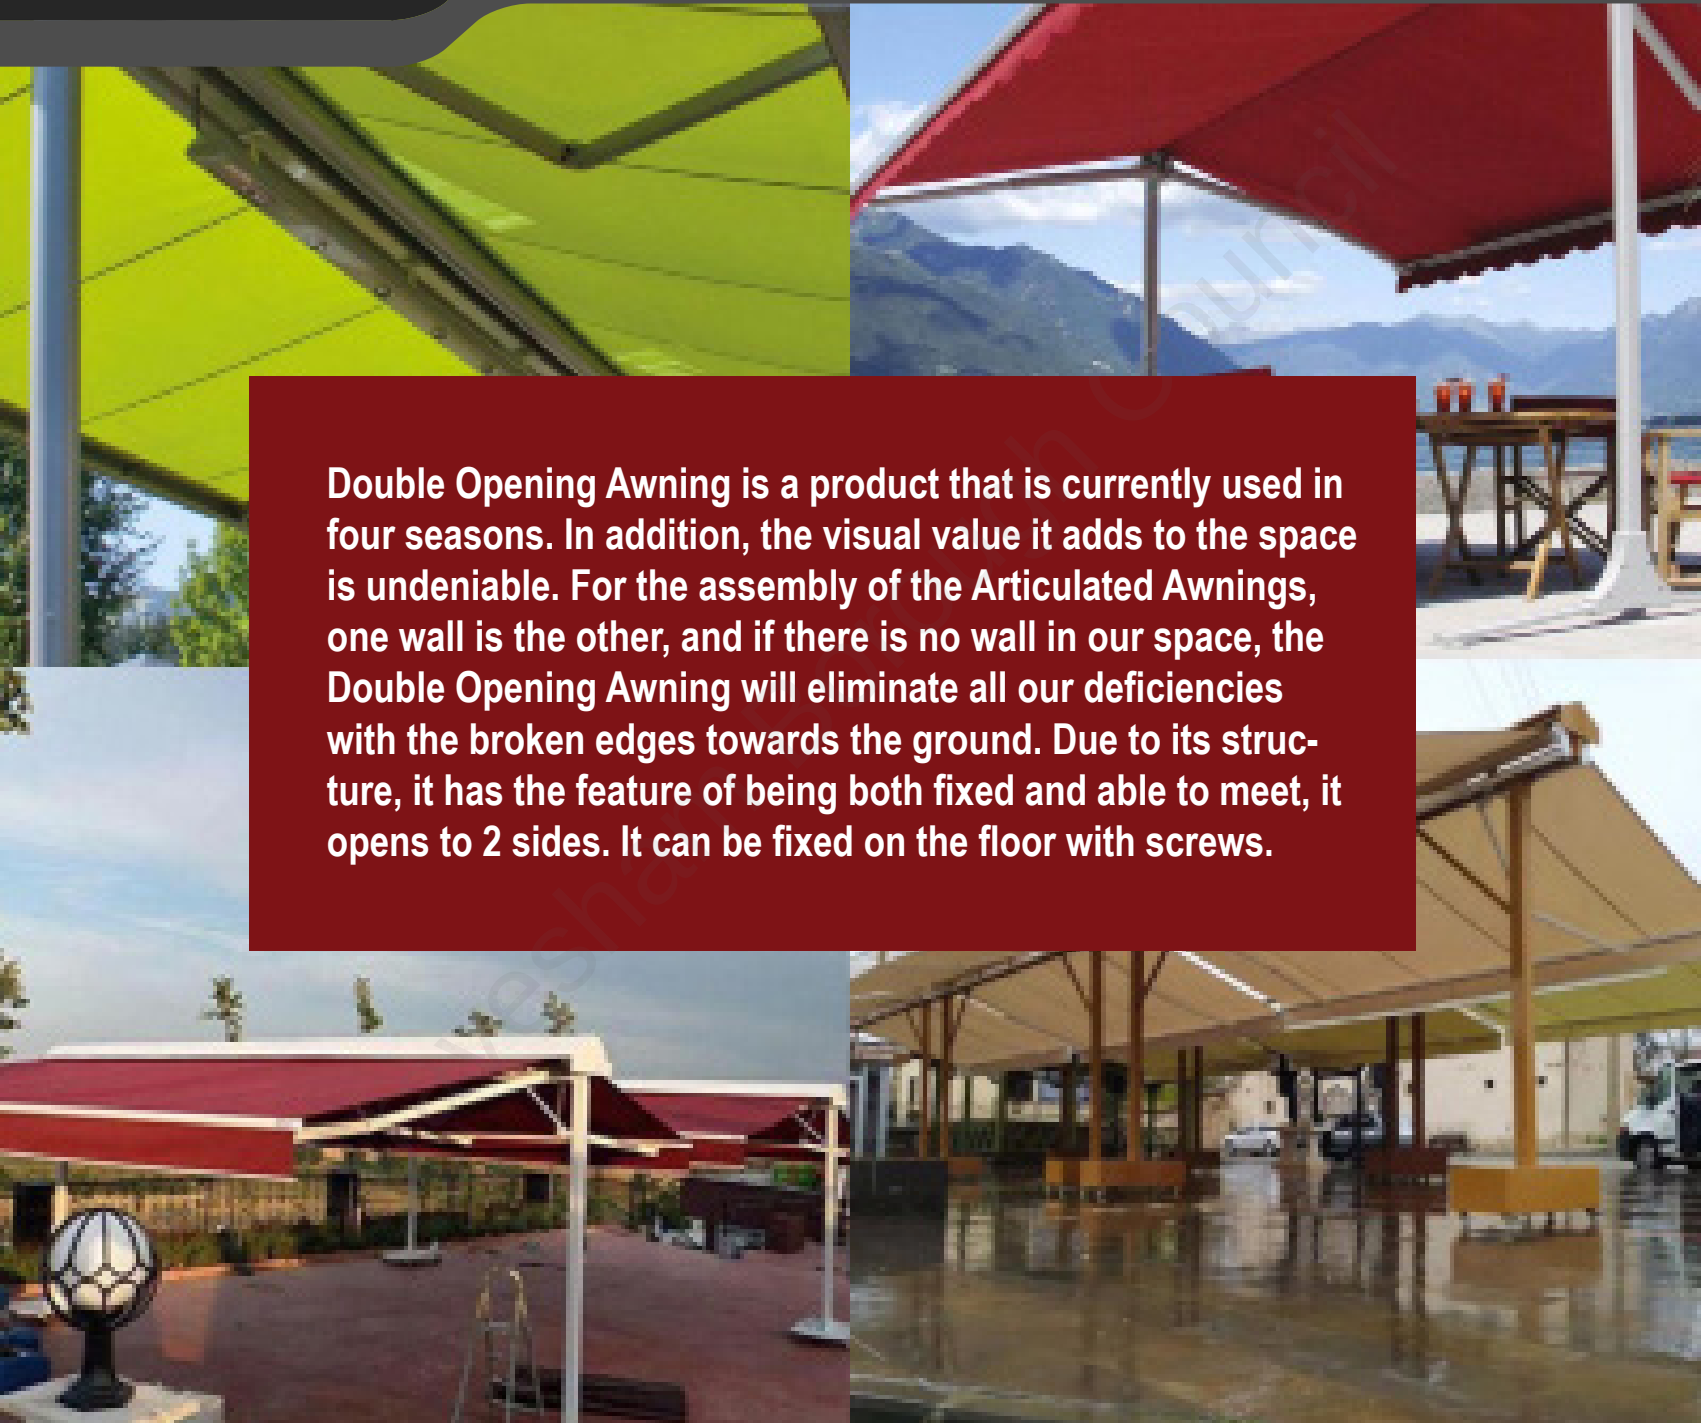

WintTent are systems with a wide range of applications, providing aesthetics and shading, manual and remote controlled models. It is not taken at home or workplaces. WintTent can move up to 0-180 °. In this way, it can be used in the range, shading according to need. With its elegant and stylish design, it adds a modern look to the spaces besides candy Thanks to its modern frame design, it takes up less space and displays an aesthetic appearance when the awning is closed.

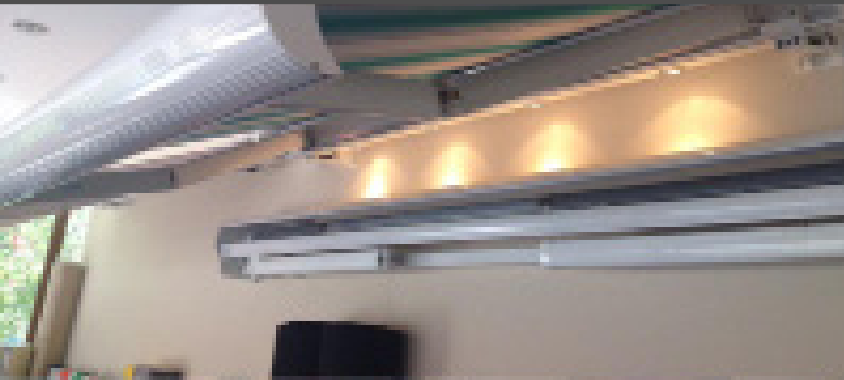

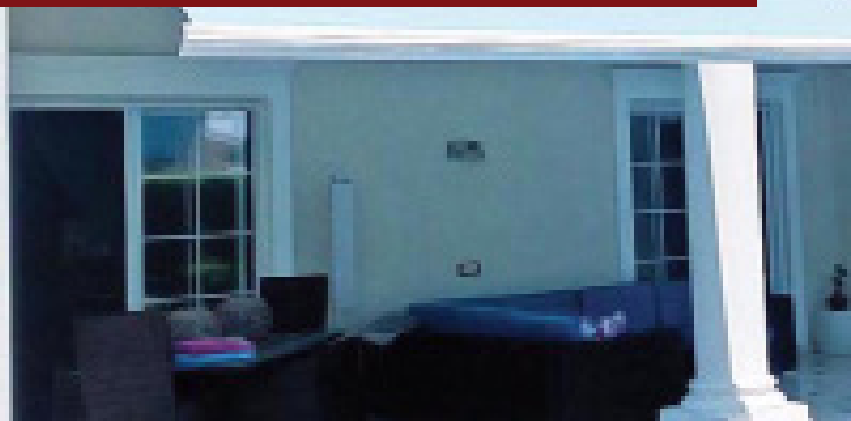

Articulated awning systems, which include quality together with their aesthetic lines, have a wide range of uses such as workplaces, gardens, balconies and terraces. It adds aesthetics to your space with your choice of aluminum and fabric that you choose in accordance with the concept. With the hinged awning, you can experience comfort without losing the joy of the sun.

Double Opening Awning is a product that is currently used in four seasons. In addition, the visual value it adds to the space is undeniable. For the assembly of the Articulated Awnings, one wall is the other, and if there is no wall in our space, the Double Opening Awning will eliminate all our deficiencies with the broken edges towards the ground. Due to its structure, it has the feature of being both fixed and able to meet, it opens to 2 sides. It can be fixed on the floor with screws.

Cassette awning system is the most modern and most advanced product. When this model is turned off, the mechanism and fabric remain completely inside the cassette. The cassette awning adds aesthetics to the facades with its impressive design. It protects the fabric and its working mechanism from natural conditions with the advantage of having a compact design.

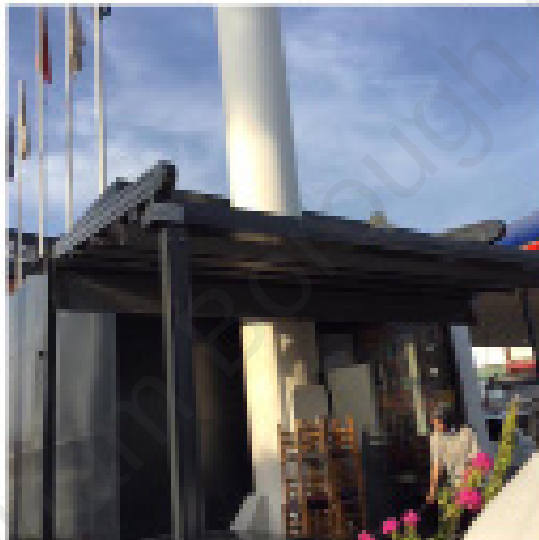

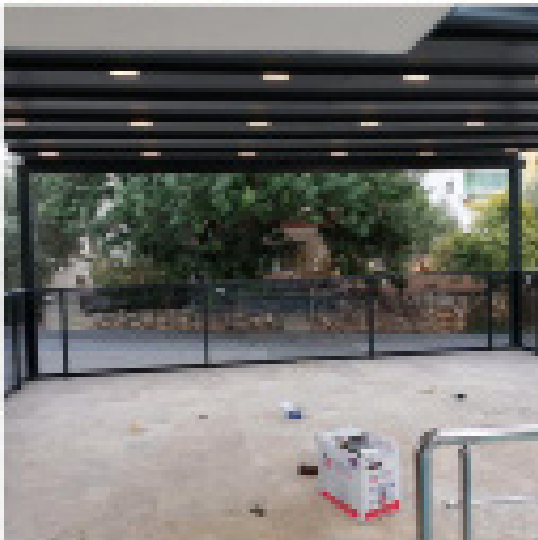

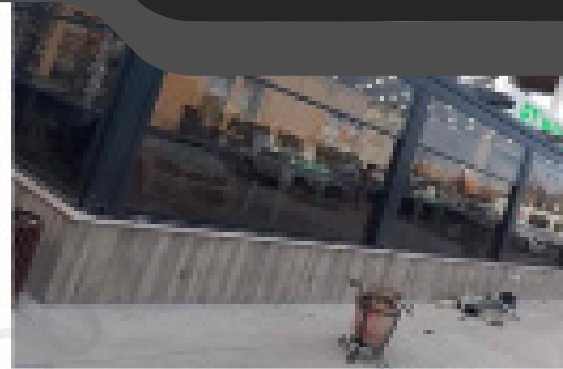

In addition to windows and balconies, it is one of the most preferred models in the entrance of small businesses. Thanks to its healthy skeletal structure, it is a product that has a more practical application visually and in use.

Now you can make your dreams come true in the winter garden. By making the Winter Garden transparent, you can enjoy the uninterrupted use of your garden and terraces, whether from your workplace or from your café garden, not for a certain month of the year, but for 12 months. The edges of this system, whose upper parts are produced as fixed, are zippered and can be easily collected when desired. When you close the edges of your winter garden, you can protect your space from rain and cold in winter, and you can adjust the ambient temperature as you wish with air conditioners and heaters. Transparent Coated Winter Gardens can be used in rain-resistant gardens and terrace floors, in cafes, restaurants and workplaces.
