1. Introduction

1.1. Instruction

Yellow Sub Geo Ltd (Yellow Sub) was instructed by The Brunton Boobyer Partnership Ltd on behalf of W.E. Roberts (the Client) to provide a Phase 1 preliminary risk assessment (Desk Study) for the extension of an existing industrial facility at J1 Unit, Northfleet Industrial Estate, Northfleet, Gravesend, DA11 9BL (the Site). Instruction to proceed in accordance with Yellow Sub proposal (Ref: P22526_P1) was confirmed by email dated 19th December 2022.

1.2. Brief

A planning application for the extension of the existing industrial facility on Site has already been submitted by the Client. As part of the Statutory consultation process, an objection from the Environment Agency (EA) has been received which states:

We object to this proposal, as it does not demonstrate that the risks of pollution to controlled waters are acceptable, or can be appropriately managed. We therefore recommend that planning permission is refused. Reason(s): The previous use of the development site as a commercial/industrial site presents a risk of contamination that could be mobilised during construction to pollute controlled waters. Controlled waters are particularly sensitive in this location because the site is located upon a principal aquifer/secondary aquifer.

The EA have suggested that the above objection may be overcome by submitting a suitable preliminary risk assessment. Yellow Sub have been asked to provide such a report.

1.3. Scope

This report presents desk study research which, in turn, is used to develop a conceptual site model and inform a preliminary environmental risk assessment.

The report identifies key potential land quality risks and uncertainties associated with the ground conditions which may require further assessment and/ or risk management in due course via suitable condition(s) linked to the future planning consent.

1.4. Limitations

This report is written strictly for the benefit of the Client and bound by the conditions presented in Appendix A.

2. Site data

The following section collates and presents available information pertinent to the Site and its local environs.

2.1. Site location

The Site is a small section of land including a warehouse unit located in Northfleet Industrial Estate. The Site address is as follows:

Unit J1
Northfleet Industrial Estate,
Lower Road,
Northfleet,
DA11 9BL

The area of the Site, taken from the red line boundary illustrated in Appendix B, is approximately 0.32Ha and the National Grid Reference at the centre of Site is: 561310, 175080.

2.2. Site description

The Site comprises a light industrial unit and adjacent parking area. The unit itself comprises a portal-frame warehouse, primarily given over to product storage, with a small office area at the front of the unit. The unit has part-brick-clad and part-metal clad walls and a corrugated roof. The roof may comprise asbestos cement. The unit is currently occupied by a packaging wholesaler.

The adjacent parking area is enclosed with a metal palisade fence. Metal gates provide access from the road. The area is predominantly covered in crushed aggregate hardcore, with a small concrete apron at the gated entrance. Brambles and small trees occupy the Site boundary and are encroaching onto the hardcore area. A number of shipping containers and vehicles are present. An area for gas bottle storage is located immediately adjacent to the entrance.

There does not appear to be any bulk fuel storage on the Site.

2.3. Proposed development

The Site comprises a warehouse unit and vacant adjacent land in Northfleet Industrial Estate off Lower Road in Northfleet. The Client is proposing to extend the current warehouse unit by 12.5m to the west. This extension will be two storeys. The remaining land parcel will be redeveloped into a car park. Plans of the proposed development have been provided to Yellow Sub and are included in Appendix B.

2.4. Geology

According to British Geological Survey (BGS) 1:50,000 scale mapping, the general geological sequence underlying the Site is as follows:

2.4.1. Superficial: Alluvium (clay, silt, sand and peat).

Alluvium is the unconsolidated detrital material deposited by a river, stream or other body of running water. It may contain layers of silt, sand, peat and basal gravel. Superficial deposits are indicated to be continuous across the Site

2.4.2. Bedrock: Chalk

The bedrock beneath the Site is indicated by the BGS to comprise Lewes Nodular Chalk Formation, Seaford Chalk Formation and Newhaven Chalk Formation (undifferentiated).

The Lewes Nodular Chalk Formation is described as 'hard to very hard nodular chalks and hardgrounds with interbedded soft to medium hard chalks (some grainy) and marls; some griotte chalks.' The Seaford Chalk Formation is described as 'Firm white chalk with conspicuous semi-continuous nodular and tabular flint seams. Hardgrounds and thin marls are known from the lowest beds. Some flint nodules are large to very large.' The Newhaven Chalk Formation is described as 'soft to medium hard, smooth white chalks with numerous marl seams and flint bands, including abundant Zoophycos flints.'

The above geological sequence is confirmed by borehole data within the BGS database which is summarised in Table 2-1 below.

Table 2-1 BGS published borehole data

Borehole reference	Strata	Depth (m)
TQ67SW791	Drift.	GL- 4.38
(200m south east)	Chalk and flints.	4.38 - 21.34
TQ67NW525	Reinforced concrete. (MADE GROUND)	GL - 0.15
(40m south west)	Yellow fine to coarse sand; fine to coarse flint. (MADE GROUND)	0.15 - 0.40
	Stiff brown and grey sandy clay with some coarse flint. (MADE GROUND)	0.40 - 1.80
	Orange, brown slightly sandy very clayey silt. (HEAD)	1.80 - 2.10
	Structureless chalk.	2.10 - 4.0

*GL = Ground Level

2.5. Hydrogeology

The Environmental Agency (EA) has classified the bedrock geology beneath the Site as a Principal Aquifer. The superficial Alluvium has been classified by the EA as a Secondary Undifferentiated Aquifer.

A Principal Aquifer is described by the EA as 'Layers of rock or drift deposits that have high intergranular and/or fracture permeability – providing high levels of water storage. May be able to

support water supply and/or river base flow on strategic scales.' Secondary Undifferentiated aquifers are described as 'cases where it has not been possible to attribute either category A or B to a rock type. This means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type'

The Site lies within Zone 2 of a Source Protection Zone (SPZ) and groundwater vulnerability is classed as medium-high.

2.6. Hydrology

2.6.1. Surface water

There are no on Site surface water features. The River Thames is located approximately 360m north-west of the Site. The nearest notable water features to the Site are the surface water ponds and ditches within Botany Marshes and the wider Swanscombe Peninsular SSSI, which extend north-eastwards from a point 75m from the Site at its closest.

2.6.2. Flooding

The Site is shown by EA mapping to be located within Flood Zone 3 (flooding from rivers and sea) however is within an area benefitting from flood defences.

EA mapping indicates that the majority of the Site is at a very low risk of flooding from surface water, but with small areas at the north and south of the Site at a medium risk.

2.6.3. Groundwater flooding

BGS data indicates there is limited potential for groundwater flooding to occur across the Site.

2.7. Site History

A review of historical Ordnance Survey (OS) mapping of the site has been undertaken. This historical mapping is provided in Appendix C. The salient observations are summarised in Table 2-2.

Table 2-2 Site History

Date	Details	Development considerations
1864 to 1879 (1:2,500)	The earliest OS mapping shows the Site to be undeveloped and located in the Northfleet Marshes. A small windmill is located 50m to the east of the Site. 160m to the south of the Site is an area of 'old clay pits'. There is a cement works present 400m to the southeast of the Site and a chalk pit adjacent to this. The South Eastern Railway lies 400m south of the Site. A small residential area is present 130m to the south of the Site.	Possible infill of clay pits with unknown materials, with potential migration of contaminants from off-Site sources.

Date	Details	Development considerations
1897 to 1898 (1:2,500)	No significant changes to Site. Three cement works are now present, 30m to the southwest of the Site, 250m to the northeast of the Site and the previously seen, 1864 cement works has expanded westwards by approximately 100m. There are several tramway lines running approximately 100m from the east and south of the Site. There is a paper mill 330m west of the Site. A gas works has been built 220m southeast of the Site. The 1864 windmill is no longer in use. The old clay pits and chalk pit previously noted, are no longer labelled however several chalk pits are now present along the railway, 350–450m from Site.	Possible migration of contaminants from off Site cement works, tramlines and gas works.
1909 (1:2,500)	No significant changes on Site. Addition of three new tramlines 120m east of Site, associated with the Tower Portland cement works. There is now a reservoir 180m west of the site. Expansion of the chalk pits adjacent to the railway line. The gasworks east of Site is no longer labelled.	None.
1923 (1:10,560)	No significant changes on or off Site.	None.
1932 (1:10,560)	No significant changes on Site. Two of the cement works (to the southwest and east) are no longer shown, although smaller buildings remain in their place. A lead works is now present 180m to the north of the Site.	Possible migration of contaminants from off Site lead works.
1961 to 1962 (1:10,000)	No significant changes to Site. A 'factory' has been built 215m southwest of the Site. A mineral railway has been developed that runs within 100m of the Site from the northeast to the southwest. A pipeline is labelled along the southern Site boundary.	Possible migration of contaminants from off-site factory and railway lines.
1977 to 1991 (1:1,250 & 1:2,500)	Industrial buildings are developed on and directly adjacent to the Site to the east, south and southwest. The 1897 cement works to the northeast is no longer labelled as a cement works and an electric substation is shown 150m northeast of the Site. There are now two warehouses, a depot, a factory and a works 50–100m southwest of the Site.	Possible migration of contaminants from on Site and off Site industrial buildings.
1991 to 1993 (1:10,000)	No significant changes to Site. The 1897 paper mill is now labelled as an industrial estate. The lead works to the north of the site is now labelled as just 'works'.	None.

Date	Details	Development considerations
2016 (1:10,000)	No significant changes to Site. A building has been constructed bordering the Site boundary to the north.	None.
2022 (1:10,000)	No significant changes to Site. The reservoir to the west of the Site is no longer present.	None.

2.7.1. Other data sources

Historical images from the Site confirm some of the features illustrated on the OS maps. Below, aerial images taken from 1960 (Figure 2-1) and 1953 (Figure 2-2) display the railway lines, paper mill, reservoir, cement and lead works as depicted in the site history obtained from historic OS maps.

Figure 2-1 Google Earth historic image dated 1960. Showing the Site, outlined in red, undeveloped, as well as railway line, the paper mill and reservoir in the southwest corner.

Figure 2-2 Image dating 1953 displaying historic cement and lead works seen bottom right, paper mills top centre and the Site location at the centre of the image.

2.8. Environmental Database search

An Envirocheck report was purchased as part of the desk study assessment. The full report is provided in Appendix C. A summary of the database records is provided in Table 2-3 with reference to entries in a buffer zone of 250m from the Site boundary, unless considered to have relevance at greater distances.

Table 2-3 Environmental database records

Distance (m)/ direction	Land use / permitted activity / authorisation	Development consideration
211 N	1No. historical landfill site dated 1977.	None.
142 W and 217 SW	2No. areas of potentially infilled land (non-water) dated 1994 and 1991 respectfully.	None.
207 S	1No. area of potentially infilled land (water) dated 1898.	None.
148 N	1No. Control of Major Accident Hazard Sites (COMAH), upper tier and active.	None.

2.9. Geo-hazards

The Envirocheck report includes information from the BGS regarding potential geohazards on or near the Site. These potential geo-hazards have been summarised in Table 2-4 below.

Table 2-4 Summary of geo-hazards

Ground stability hazards	The following potential ground stability hazards have been identified by the BGS on-site:	
	Collapsible Ground	Very low
	Compressible Ground	Very low
	Ground Dissolution	Very low
	Landslide Ground	Very low
	Running Sand	Very low
	Shrinking or Swelling Clay	Low
Radon	The property is in a Lower probability radon area (less than 1% of homes are estimated to be at or above the Action Level).	

2.10. Environmental Designations

Online mapping (Defra) indicates there are environmental designations within the vicinity of the Site and in the surrounding local area, a summary of these designations is provided in

Table 2-5 below.

Gravesham Borough Council

Table 2-5 Environmental designations within proximity to the Site

Location	Designation	Information
75 NW	Swanscombe Peninsula Site of Special Scientific Interest (SSSI)	SSSI is of special interest for a range of geological and biodiversity features, including species dependent upon open water and wetlands.
280 SW	Nitrate Vulnerable zone (North Kent)	None.

Swanscombe Peninsular SSSI represents a sensitive receptor within close proximity to the Site. The special features within the SSSI includes species and assemblages of species that are dependant upon aquatic habitats, or wetland habitats. As such, this is considered to be a key receptor should there be a pathway for migration of contaminants between the Site and the SSSI.

2.11. Preliminary UXO Risk Assessment

Zetica produce online mapping relating to potential risks associated with discovering unexploded ordnance (UXO). Based on this mapping, the site is indicated to be at a high risk from all forms of Unexploded Ordnance. Therefore, a detailed UXO risk assessment is recommended for the Site.

3. Preliminary conceptual model and risk assessment

The following section draws together the relationship of identified sources, viable pathways and environmental receptors in order to define a conceptual site model for the ground conditions beneath the site. These elements are used to underpin a qualitative assessment of risk.

3.1. Sources

The key identified contaminant sources are summarised as follows:

3.1.1. On-site source potential

The Site has been used since the 1970s as a light industrial unit. The Site is currently being used by a packaging wholesaler, and for vehicle storage on the associated yard area. There are potential on-site sources associated with this use of the Site:

- Made ground associated with the creation of the current development plateau in the 1970s, which may include contaminants; and,
- Leaks and spills from vehicles stored on the Site and from current and former Site operations.

3.1.2. Off-site source potential

The following potential off-Site sources have been identified:

- Historic cement works;
- Historic gas works;
- Historic lead works;
- Railway lines;
- Historic clay pits (may have been infilled with unknown materials); and,
- Metal fabrication works.

3.2. Pathways

It is assumed that the relevant existing potential pathways comprise:

- Direct contact with contaminated materials (dermal soil/ leachate contact, soil ingestion and dust ingestion/ inhalation),
- Ingress into potable pipes,
- Migration of gas and/or vapours through preferential pathways and/or permeable sub-surface materials and,
- Leaching of contaminants and downwards migration into and through groundwater, contaminating the principal bedrock aquifer and secondary undifferentiated superficial aquifer.
- Migration of contaminants through groundwater or preferential pathways from the Site towards the water bodies within the Swanscombe Peninsular SSSI.

3.3. Receptors

The key identified potential environmental receptors are summarised as follows:

3.3.1. Environmental

The environmental receptors that have been identified within the vicinity of the Site are considered to be:

- the Principal and Secondary Undifferentiated aquifers (Alluvium and White Chalk);
- the surface water bodies within the Swanscombe Peninsular SSSI; and,
- the River Thames.

3.3.2. Human health

Human receptors considered to be associated with the Site comprise;

- Current users of the Site and adjacent sites;
- Construction workers associated with the redevelopment of the Site; and,
- Future site users.

3.4. Preliminary Risk Assessment

A summary of the potential contamination linkages associated with the Site is presented in Table 3-1, alongside an assessment of the risks posed by each linkage. The contaminant linkages have been assessed using the risk assessment methodology described in CIRIA C552 (2001). As such, risk is considered to be a function of both the probability (likelihood) of contamination occurring at the study site and also the potential severity (consequence) of the environmental impacts associated with any such contamination.

Table 3-1 Pollutant linkage assessment

Sources	Pathways	Receptors	Consequences	Probability	Risk	Risk management
On-Site sources within made ground, leaks & spills associated with the use of industrial units since 1970s.	Direct contact with contaminated materials (dermal, ingestion, inhalation).	Current site users	Medium	Unlikely	Low	None required.
		Future site users.	Medium	Unlikely	Low	None required.
		Construction workers.	Medium	Likely	Moderate	Risk can be suitably mitigated using an appropriate Safe System of Work commensurate with brownfield development.
	Ingress into potable pipes.	Current site users	Medium	Unlikely	Low	None required.
		Future site users.	Medium	Unlikely	Low	None required.
	Migration of gas and/or vapours through preferential pathways and/or permeable sub-surface materials.	Future site users.	Medium	Low likelihood	Moderate/low	Site-specific investigation and assessment recommended as part of Site re-development process.
	Leaching of contaminants and downwards migration into and through groundwater	Principal and Secondary Undifferentiated aquifers.	Medium	Low likelihood	Moderate/low	Site-specific investigation and assessment recommended as part of Site re-development process.
	Leaching of contaminants and downwards migration into and through groundwater, lateral migration through groundwater or preferential pathways	Swanscombe Peninsular SSSI and River Thames.	Medium	Unlikely	Low	None required.

Sources	Pathways	Receptors	Consequences	Probability	Risk	Risk management
Potential contamination from off Site sources including: cement works, gas works, lead works, railway lines and metal fabrication works.	Direct contact with contaminated materials (dermal, ingestion, inhalation).	Future site users.	Minor	Unlikely	Very low	None required.
		Construction workers.	Minor	Low likelihood	Very low	Risk can be suitably mitigated using an appropriate Safe System of Work commensurate with brownfield development.
	Ingress into potable pipes.	Current and future site users.	Medium	Unlikely	Low	None required
	Migration of gas and/or vapours through preferential pathways and/or permeable sub-surface materials.	Future site users.	Mild	Unlikely	Very low	None required.
	Leaching of contaminants and downwards migration into and through groundwater	Principal and Secondary Undifferentiated aquifers.	Medium	Unlikely	Low	None required.
		Swanscombe Peninsular SSSI and River Thames.	Medium	Unlikely	Low	None required.
Ground gas created by decomposition of natural organic matter within	Migration of gas and/or vapours through preferential pathways and/or permeable sub-surface materials.	Current and future site users	Medium	Unlikely	Low	Collection of site-specific ground gas data and a ground gas risk assessment is recommended.

Sources	Pathways	Receptors	Consequences	Probability	Risk	Risk management
alluvium beneath the site						
Radon gas	Migration of gas and/or vapours through preferential pathways and/or permeable sub-surface materials.	Current and future site users	Medium	Unlikely	Low	None required.
Unexploded ordnance within sediments beneath the Site	Disturbance of UXO during excavations/ foundation construction on site during redevelopment: Explosion and bodily harm/ death	Construction workers	Severe	Unlikely	Moderate/ low	UXO risk assessment required prior to any excavation work or ground disturbance.

4. Conclusion

4.1. Conclusions

The Site comprises an industrial unit and adjacent land in Northfleet Industrial Estate off Lower Road in Northfleet. The Site itself has undergone little development from the earliest OS maps in 1864 and was a disused field until 1978 when the present light-industrial site was first constructed on the land. However, the area surrounding the Site has undergone extensive development with railway lines, 3No. cement works, a lead works and gas works all located within 250m of the site historically. Furthermore, the earliest OS maps show clay pits to the south of the site, which have been infilled with unknown materials.

Based on the findings of the desk study and the proposed commercial development, and assessment of land quality had been undertaken in accordance with current guidance and best practise. On this basis, the risk associated with impact from potential contamination within soils and groundwater to **human health of current and future site users** is considered to be **MODERATE/ LOW** to **VERY LOW**.

The potential risk to **human health of construction workers** is assessed as **MEDIUM**. This risk can be suitably mitigated by the use of a suitable Safe System of Work commensurate with good practice on brownfield sites.

The potential risk to the **wider environment** is assessed to be predominantly **LOW** due to the lack of evidence for contamination sources on the Site. However, due to the presence of a Principal Aquifer beneath the Site and given the light-industrial site history, the potential risk posed to the **Principal Aquifer** is assessed as **MODERATE/ LOW**.

The risk associated with **radon** on this site is **LOW**.

A preliminary assessment of risk posed by unexploded ordnance (UXO) notes the Site to be in an area of **HIGH RISK**.

4.2. Recommendations

Due to the presence of the Principal Aquifer beneath the Site, it is recommended that a suitable site investigation be undertaken as part of the Site redevelopment process, to determine whether shallow soils might provide a contaminant source. This site investigation will also provide an opportunity to assess the ground gas regime and inform design of gas protection measures within the new structure, if required.

It is recommended that this investigation is combined with the geotechnical investigation of the Site to inform foundation design.

Prior to any intrusive work being undertaken it is recommended that a detailed UXO risk assessment is completed.

Report Conditions

This report has been prepared by Yellow Sub Geo Ltd. (Yellow Sub Geo) in its professional capacity as soil and groundwater specialists, with reasonable skill, care and diligence within the agreed scope and terms of contract and taking account of the manpower and resources devoted to it by agreement with its client, and is provided by Yellow Sub Geo solely for the internal use of its client.

The advice and opinions in this report should be read and relied on only in the context of the report as a whole, taking account of the terms of reference agreed with the client. The findings are based on the information made available to Yellow Sub Geo at the date of the report (and will have been assumed to be correct) and on current UK standards, codes, technology and practices as at that time. They do not purport to include any manner of legal advice or opinion. New information or changes in conditions and regulatory requirements may occur in future, which will change the conclusions presented here.

Where necessary and appropriate, the report represents and relies on published information from third party, publicly and commercially available sources which is used in good faith of its accuracy and efficacy. Yellow Sub Geo cannot accept responsibility for the work of others.

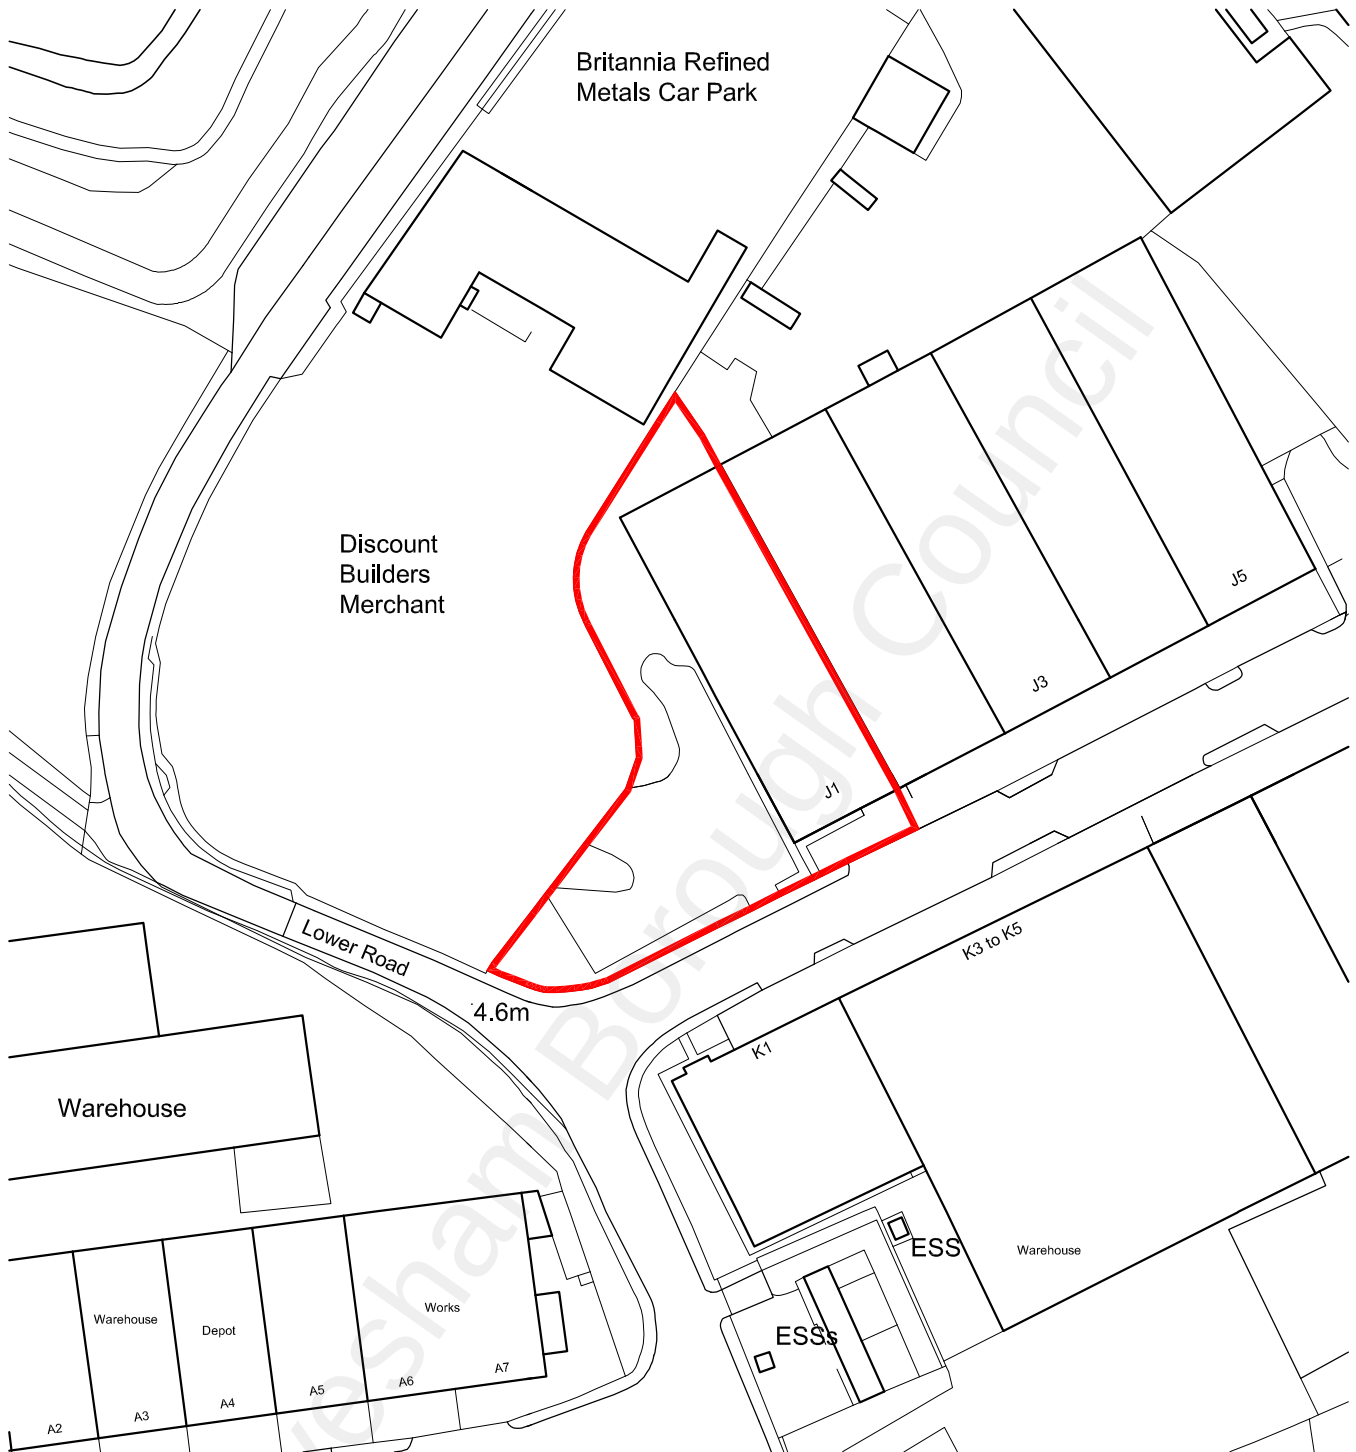

Site investigation results necessarily rely on tests and observations within exploratory holes only. The inherent variation in ground conditions mean that the results may not be representative of ground conditions between exploratory holes. Yellow Sub Geo take no responsibility for variation in ground conditions between exploratory positions.

This report is confidential to the client. The client may submit the report to regulatory bodies, where appropriate. Should the client wish to release this report to any other third party for that party's reliance, Yellow Sub Geo may, by prior written agreement, agree to such release, provided that it is acknowledged that Yellow Sub Geo accepts no responsibility of any nature to any third party to whom this report or any part thereof is made known. Yellow Sub Geo accepts no responsibility for any loss or damage incurred as a result, and the third party does not acquire any rights whatsoever, contractual or otherwise, against Yellow Sub Geo except as expressly agreed with Yellow Sub Geo in writing. Yellow Sub Geo reserves the right to withhold and/ or negotiate the transference of reliance on this report, subject to legal and commercial review.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Report Version v53.0

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Agency & Hydrological					
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes	Yes	n/a
Contaminated Land Register Entries and Notices					
Discharge Consents	pg 3			21	16
Prosecutions Relating to Controlled Waters			n/a	n/a	n/a
Enforcement and Prohibition Notices					
Integrated Pollution Controls	pg 12			3	
Integrated Pollution Prevention And Control	pg 12		11	2	2
Local Authority Integrated Pollution Prevention And Control					
Local Authority Pollution Prevention and Controls	pg 16		10	10	6
Local Authority Pollution Prevention and Control Enforcements	pg 20		1	1	
Nearest Surface Water Feature	pg 20		Yes		
Pollution Incidents to Controlled Waters	pg 20			2	5
Prosecutions Relating to Authorised Processes	pg 21				1
Registered Radioactive Substances					
River Quality					
River Quality Biology Sampling Points					
River Quality Chemistry Sampling Points					
Substantiated Pollution Incident Register	pg 21			1	1
Water Abstractions	pg 22				14 (*71)
Water Industry Act Referrals					
Groundwater Vulnerability Map	pg 43	Yes	n/a	n/a	n/a
Groundwater Vulnerability - Soluble Rock Risk	pg 43	1	n/a	n/a	n/a
Groundwater Vulnerability - Local Information		1	n/a	n/a	n/a
Bedrock Aquifer Designations	pg 43	Yes	n/a	n/a	n/a
Superficial Aquifer Designations	pg 43	Yes	n/a	n/a	n/a
Source Protection Zones	pg 43	2			1
Extreme Flooding from Rivers or Sea without Defences	pg 43	Yes	Yes	n/a	n/a
Flooding from Rivers or Sea without Defences	pg 44	Yes		n/a	n/a
Areas Benefiting from Flood Defences	pg 44	Yes		n/a	n/a
Flood Water Storage Areas				n/a	n/a
Flood Defences				n/a	n/a
OS Water Network Lines	pg 44		10	28	72

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Waste					
BGS Recorded Landfill Sites					
Historical Landfill Sites	pg 57		1	2	3
Integrated Pollution Control Registered Waste Sites					
Licensed Waste Management Facilities (Landfill Boundaries)	pg 58		1	1	3
Licensed Waste Management Facilities (Locations)	pg 59		1	2	8
Local Authority Landfill Coverage		2	n/a	n/a	n/a
Local Authority Recorded Landfill Sites					
Potentially Infilled Land (Non-Water)	pg 61		2	1	11
Potentially Infilled Land (Water)	pg 62		1		1
Registered Landfill Sites	pg 63			1	6
Registered Waste Transfer Sites	pg 66				1
Registered Waste Treatment or Disposal Sites	pg 66				1
Hazardous Substances					
Control of Major Accident Hazards Sites (COMAH)	pg 67		1		
Explosive Sites					
Notification of Installations Handling Hazardous Substances (NIHHS)					
Planning Hazardous Substance Consents	pg 67			1	
Planning Hazardous Substance Enforcements					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Geological					
BGS 1:625,000 Solid Geology	pg 68	Yes	n/a	n/a	n/a
BGS Estimated Soil Chemistry	pg 68	Yes		Yes	Yes
BGS Recorded Mineral Sites	pg 68			3	18
BGS Urban Soil Chemistry					
BGS Urban Soil Chemistry Averages					
CBSCB Compensation District			n/a	n/a	n/a
Coal Mining Affected Areas			n/a	n/a	n/a
Mining Instability			n/a	n/a	n/a
Man-Made Mining Cavities					
Natural Cavities	pg 72				2
Non Coal Mining Areas of Great Britain	pg 72	Yes	Yes	n/a	n/a
Potential for Collapsible Ground Stability Hazards	pg 72	Yes	Yes	n/a	n/a
Potential for Compressible Ground Stability Hazards	pg 73	Yes	Yes	n/a	n/a
Potential for Ground Dissolution Stability Hazards	pg 73	Yes	Yes	n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 73	Yes	Yes	n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 74	Yes	Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 74	Yes	Yes	n/a	n/a
Radon Potential - Radon Affected Areas			n/a	n/a	n/a
Radon Potential - Radon Protection Measures			n/a	n/a	n/a
Industrial Land Use					
Contemporary Trade Directory Entries	pg 75	2	52	115	112
Fuel Station Entries	pg 101		1		1
Points of Interest - Commercial Services	pg 101		25	38	20
Points of Interest - Education and Health					
Points of Interest - Manufacturing and Production	pg 109	1	13	37	20
Points of Interest - Public Infrastructure	pg 115		3	6	21
Points of Interest - Recreational and Environmental	pg 117			1	7
Gas Pipelines					
Underground Electrical Cables

LANDMARK INFORMATION GROUP®

Kent

Published 1864

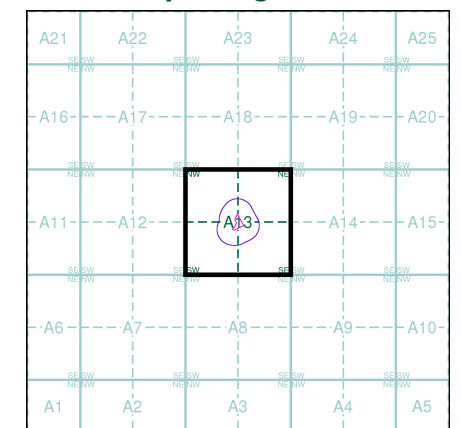

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Published 1869

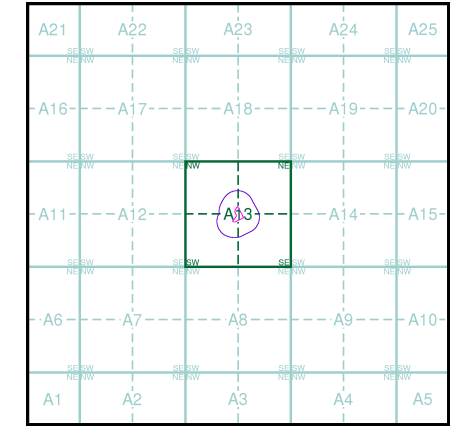

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography

Published 1947

Source map scale - 1:10,560

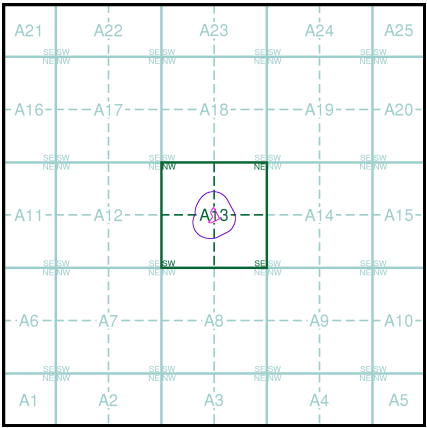

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

Gravesend

Published 1977

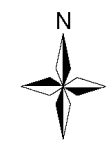

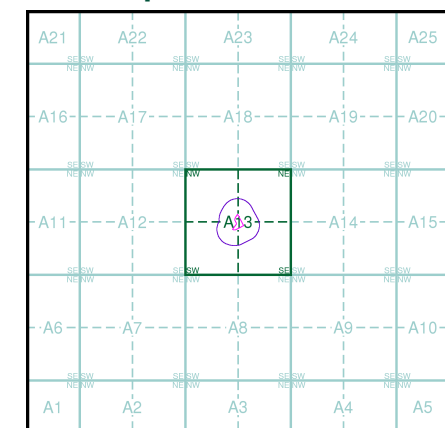

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2022

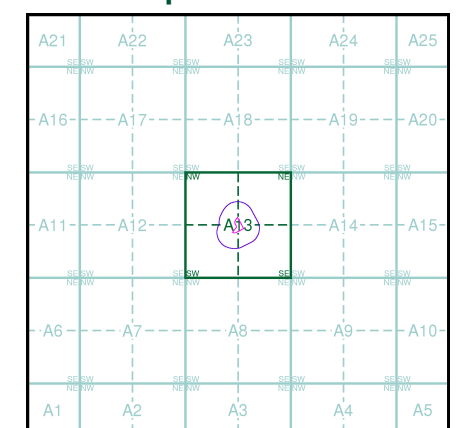

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Appendix E: CIRIA Risk Matrix

Gravesham Borough Council

Risk classification methodology

The method of risk evaluation adopted in this document is consistent with CIRIA C552 (2001). Hence, risk is considered to be a function of both the probability (likelihood) of contamination occurring at the study site and also the potential severity (consequence) of the environmental impacts associated with this contamination.

The classification system used to define contaminant probability, consequence and risk is described in the following tables.

Table A: Classification of probability

Classification	Definition
High Likelihood	There is a contaminant linkage and an event that appears either very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	There is a contaminant linkage and all the elements are present and in the right place, which means that it is probably that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term, and likely over the long term.
Low Likelihood	There is a contaminant linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	There is contaminant linkage but circumstances are such that it is improbable that an event would occur even in the long term.

Table B: Classification of consequence

Classification	Receptor	Definition	Examples
Severe	Humans	Short-term (acute) risk to human health likely to result in "significant harm" as defined in the CTL Statutory Guidance	High concentrations of cyanide on the surface of an informal recreation area
	Controlled waters	Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource	Major spillage of contaminants from site into controlled water
	Property	Catastrophic damage to buildings/property	Explosion, causing building collapse (can also equate to an acute human health risk if buildings are occupied)
	Ecology	A short-term risk to a particular ecosystem, or organism forming part of such eco-system	Potentially long term derogation of a designated site or protected species
Medium	Humans	Chronic damage to human health ("significant harm" as defined in the CTL Statutory Guidance)	Concentrations of a contaminant from a residential site exceed the site-specific assessment criteria
	Controlled waters	Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution)	Leaching of contaminants from a site to a principal or secondary aquifer
	Property	Significant damage to crops, buildings, structures and services	Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability).

Classification	Receptor	Definition	Examples
	Ecology	A significant change in a particular ecosystem	Death of a species within a designated nature reserve
Mild	Humans	Contamination present although unlikely to constitute a significant chronic health risk	Concentrations of a contaminant from a public access site moderately exceed the generic assessment criteria
	Controlled waters	Pollution of non-water resources	Pollution of non-classified groundwater
	Property	Damage to sensitive buildings/structures/services	Aggressive ground conditions leading to potential for long term degradation of buried concrete
	Ecology	Damage to the environment	Localised damage to aquatic habitat causing temporary relocation of certain species
Minor	Humans	Non-permanent health effects to human health (easily prevented by means such as personal protective clothing etc.)	The presence of contaminants at such concentrations that protective equipment is required during site works.
	Controlled waters	Potential minor release of contamination to local water features	Short term or low volume release of potentially polluting material to a secondary surface water course of low existing quality
	Property	Easily reparable effects of damage to buildings, structures and services. Harm which may result in a financial loss, or expenditure to resolve.	The loss of plants in a landscaping scheme. Discolouration of concrete
	Ecology	Short term, localised damage may occur; consequences are spatially and temporally limited	Short term or localised disruption to in situ flora or fauna; no lasting effects

Table C: Risk classification (comparison of consequence and probability)

Probability (likelihood)		Consequence (severity)			
		Severe	Medium	Mild	Minor
	High likelihood	Very high risk	High risk	Moderate risk	Low risk
	Likely	High risk	Moderate risk	Moderate/low risk	Low risk
	Low likelihood	Moderate risk	Moderate/low risk	Low risk	Very low risk
	Unlikely	Moderate/low risk	Low risk	Very low risk	Very low risk
