Biodiversity net gain

Biodiversity net gain is a legal requirement for planning permission introduced on 12 February 2024. All applications are required to either provide detailed information proving there will be a biodiversity increase; or explain why the requirement does not apply to the development.

[Find out more about biodiversity net gain, and access digital tools from our partners that can help determine if you are exempt, or produce the biodiversity metric information required.](#)

Do you believe that, if the development is granted permission, the general Biodiversity Gain Condition (as set out in [Paragraph 13 of Schedule 7A of the Town and Country Planning Act 1990 \(as amended\)](#)) would apply?

- ☐ Yes
☒ No

Biodiversity net gain has been introduced as a general condition for planning permission. As set out in [The Environment Act 2021](#): "grants of planning permission in England [are] to be subject to a condition to secure that the biodiversity gain objective is met". Therefore, in England, all planning permissions are generally subject to biodiversity gain rules, unless they are specifically exempt or out of scope.

If you have stated that the biodiversity net gain requirement does not apply to your application you must provide the reason(s) why, and may also need to supply evidence (especially where you believe the application is eligible for the 'de minimis' exemption).

[You can use our partner's free online tool to determine if you are exempt and to produce detailed reasons](#)

Please add all the reasons why biodiversity net gain does not apply and enter a justification for each one

Reason biodiversity net gain does not apply:

Development subject to the de minimis exemption (development below the threshold)

What best describes the size of your site?:

Under 25 square metres

Please justify the reason why biodiversity net gain does not apply:

There are no priority habitats on site and as such the development is below the threshold.

Note: Please read the help text for further information why developments may be exempt or not in scope.

Industrial or Commercial Processes and Machinery

Does this proposal involve the carrying out of industrial or commercial activities and processes?

☒ Yes

☐ No

Please describe the activities and processes which would be carried out on the site and the end products including plant, ventilation or air conditioning. Please include the type of machinery which may be installed on site:

The site will be used to bag/package aggregates and cementitious products into smaller palletised 20kg plastic bags. The material will be re-packaged in the raw form it is received in.

The materials will be delivered to the site from the Port Terminal with one shipment arriving every two months. The material will be loaded onto open back trailers and transported via shunter tractor units (owned and operated by Seacon). These tractors are smaller than standard HGV tractor units and the shipment will be off loaded within a single day which is approximately 150 shunts and all within the port.

The material is then craned and lifted via the overhead gantry crane which will be installed within the warehouse. This crane will hook the bags using lifting loops and move them into the hopper. An automated cutting mechanism will then discharge the material into the hopper, which will then feed the material using screw conveyors into the silos. Once the material is in the silo it will be discharged towards the production line through screw conveyors or through pipes using air. The production line is in a completely sealed enclosure which will not allow dust to escape.

The production line then sees the materials distributed into 20kg bags which will be stacked on wooden pallets (approximately 40 bags on each), and then hooded in plastic before being put into stock within the shed. The majority of stock pallets will be loaded for distribution inside the shed.
