

ECOLOGICAL ADVICE SERVICE

TO: Katherine Parkin

FROM: Helen Forster

DATE: 23 December 2025

SUBJECT: Land At Dalefield Way, Gravesend 20250763

The following is provided by Kent County Council's Ecological Advice Service (KCC EAS) for Local Planning Authorities. It is independent, professional advice and is not a comment/position on the application from the county council. It is intended to advise the relevant planning officer(s) on the potential ecological impacts of the planning application and if sufficient/appropriate ecological information has been provided.

Any additional information, queries or comments on this advice that the applicant or other interested parties may have must be directed in every instance to the planning officer, who will seek input from the EAS where appropriate and necessary.

The proposal is for: *Change of use of the land for open storage (B8 use) primarily for equipment and operations related to Dalefield Way Industrial Park (B8 use) with associated installation of hardstanding/surface treatment, security fencing/gates, access, a soft landscaping mound, and erection of temporary office cabins.*

We have reviewed the submitted information and are advise that additional information assessing the impact on the SSSI is required to determine the planning application,.

Protected/Notable Species

We advise that we are satisfied that the conclusions of the ecological reports is valid.

The site has detailed that the majority of the site is short grassland and the eastern boundary has the greatest interest. We understand that the vegetation along the ditch adjacent to the eastern boundary will be retained. The eastern boundary has potential to support roosting bats, reptiles, breeding birds and foraging/commuting bats.

However as the vegetation will be retained we are satisfied that further surveys are not required and instead the impact can be avoided with the submission of a precautionary mitigation strategy. We can provide further wording once the additional information on the SSSI has been provided.

Biodiversity Net Gain

Under the Environment Act 2021 and the Town and Country Planning Act 1990 (as amended), all planning applications⁵⁸ for development (unless exempt^{59,60}), must deliver at least a 10% biodiversity net gain (BNG), shown via use of the Statutory Biodiversity Metric prior to commencement of any development. Having reviewed submitted information⁶¹, we consider a 10% biodiversity net gain is a statutory requirement of this proposed development.

Any application which is required to achieve a 10% BNG must submit the following information as a minimum¹:

- confirmation that the applicant believes that planning permission, if granted, the development would be subject to the biodiversity gain condition;
- the pre-development biodiversity value(s), [either on the date of application or earlier proposed date \(as appropriate\)](#);
- where the applicant proposes to use an earlier date, this proposed earlier date and the reasons for proposing that date;
- [the completed metric calculation tool](#) showing the calculations of the pre-development biodiversity value of the onsite habitat on the date of application (or proposed earlier date) including the publication date of the biodiversity metric used to calculate that value;
- a statement whether activities have been carried out prior to the date of application (or earlier proposed date), that result in loss of onsite biodiversity value ('[degradation](#)'), and where they have:
 - a statement to the effect that these activities have been carried out;
 - the date immediately before these activities were carried out;
 - the pre-development biodiversity value of the onsite habitat on this date;
 - the completed metric calculation tool showing the calculations, and
 - any available supporting evidence of this;
- a description of any [irreplaceable habitat](#) (as set out in [column 1 of the Schedule to the Biodiversity Gain Requirements \(Irreplaceable Habitat\) Regulations 2024](#)) on the land to which the application relates, that exists on the date of application, (or an earlier date); and
- plan(s), drawn to an identified scale and showing the direction of North, showing onsite habitat existing on the date of application (or earlier proposed date), including any irreplaceable habitat (if applicable).

We advise that we are satisfied that sufficient information has been provided to meet the requirements for mandatory BNG.

¹ <https://www.gov.uk/guidance/biodiversity-net-gain#para11>

The submitted information has detailed that a BNG loss of 90% for habitats will occur due to the loss of all habitat on site and it has detailed that 1.74 units will be required to achieve a BNG of over 10%. We advise that the number of units required to achieve a BNG of over 10% may reduce if the site plan is amended as part of any mitigation required to avoid impacts on the adjacent SSSI.

Regardless of this off site habitat creation will be required to achieve a BNG either through habitat creation within the applicants landholdings (if there is any) or the purchasing of off site units Further details of off site habitat creation can be found at the end of the report. We advise that it will be possible to purchase off site units to achieve a BNG as part of this proposal and we direct the applicant towards the Kent Biodiversity Net Gain Site Register for off site habitat providers in Kent [Kent Biodiversity Net Gain Site Register | Making Space For Nature Kent](#).

We advise that details of the off site habitat creation are not required prior to determination however we advise that how the offsite habitat creation will be implemented must be agreed and registered on the biodiversity gain site register **prior to** the submission of the biodiversity gain plan (if granted). [Search the biodiversity gain sites register - GOV.UK](#)

The development, if permitted, will be subject to the deemed condition of planning permission relating to biodiversity gain as per Schedule 7A 13(1) of the Town and Country Planning Act 1990. The condition is that the development may not be begun unless—

- (a) a biodiversity gain plan has been submitted to the planning authority, and
- (b) the planning authority has approved the plan.

The condition cannot be varied or removed. An application must be made to discharge it as any other condition. We recommend it is referred to in decision notices in the form of an informative. The government's published Biodiversity Gain Plan (BGP) template should be used to discharge it: [Biodiversity gain plan - GOV.UK](#). Please note that the submission of the finalised Statutory Biodiversity Metric/BGP is required by law prior to the commencement of any development.

We advise that as no habitat creation or enhancement is proposed it doesn't meet the requirements of on site significant habitat and therefore the site does not require monitoring reports to be submitted to the LPA.

Designated Sites

The site is adjacent to the South Thames Estuary and Marshes SSSI and the submitted information has not fully assessed the impact on the proposed development. Limited landscaping has been proposed to minimise the impact from the proposed development and the SSSI.

We advise that an update assessment and if necessary review of the proposed layout must be carried out.

We advise that the assessment on impact of the SSSI is required prior to determination of the planning application to ensure that GBC can fully understand the impact on the designated site.

Helen Forster MCIEEM
Biodiversity Officer

This response was submitted following consideration of the following documents:

Preliminary Ecological Appraisal; Eco Assistance May 2025

Biodiversity Net Gain Assessment; ACJ Ecology; July 2025

Proposed Site Layout; Darling Associates Architects; No Date

OFF-SITE GAINS (NEEDS TO BE REGISTERED)

'Off-site' biodiversity gains are any BNG measures proposed outside of the red line boundary. The statutory Biodiversity Gain Plan (BGP) must contain the biodiversity gain site register reference number for any offsite units if these are used. BNG sites must be registered here: [Register a biodiversity gain site - GOV.UK](https://www.gov.uk/register-a-biodiversity-gain-site).

If off-site habitat creation is required, we direct the applicant towards the Kent Biodiversity Net Gain Site Register⁶⁹ available on the Making Space for Nature in Kent and Medway website. Biodiversity Net Gain Guidance for Kent is also available on this website.

If any off-site habitat creation/enhancement is proposed outside of the LPA boundary/National Character Area of the impact site these will be subject to spatial risk penalties.

Where off-site gains are secured on land owned by the developer (but outside the redline boundary), or on third-party land (but not through a 'habitat bank operator'⁷⁰), the biodiversity net gain needs to be subject to a deed of conservation covenants or Section 106 (as appropriate). Section 106 agreement templates are available on the Planning Advisory Service website. It is generally inappropriate to rely solely on conditions to secure off-site biodiversity net gain. The following needs to be secured as part of the off-site biodiversity net gain:

- The submission of a habitat management and monitoring plan (HMMP);*
- Notice of HMMP implementation and completion of the habitat creation and enhancement works;*
- Timescales for completion of habitat creation, and the submission of a completion report;*
- Submission of a monitoring report;*
- A habitat monitoring fee to be paid to the local planning authority on every habitat management monitoring event.*

The HMMP shall be submitted when the general BNG condition is discharged and shall contain the following information ⁷¹:

(a) a non-technical summary;

(b) the roles and responsibilities of the people or organisation(s) delivering the HMMP;

(c) the planned habitat creation and enhancement works to create or improve habitat to achieve the biodiversity net gain in accordance with the approved Biodiversity Gain Plan;

(d) the management measures to maintain habitat in accordance with the approved Biodiversity Gain Plan for a period of 30 years from the completion of development; and

(e) the monitoring methodology and frequency in respect of the created or enhanced habitat to be submitted to the local planning authority.

Monitoring reports shall be submitted to local planning authority in writing in accordance with the methodology and frequency specified in the approved HMMP.

Where off-site gains are to be secured through a 'habitat bank operator' (which has its own legal agreement and HMMP), no additional conditions or section 106 obligations are required, above a condition requiring biodiversity net gain to be delivered as set out in the planning application.

The submission of provisional/draft legal documents outlining the agreement between the applicant and the provider of any off-site gains are advisable prior to determination to confirm that the proposed route to delivering net gain is feasible, but this information is not required until submission of the pre-commencement Biodiversity Gain Plan.
