North

Not to  
scale

Trees stand approximately 7m to the height of the timber with a further 4.5m height from regrowth and a crown width from centre of 3 to 4m on all sides.

After the requested works, it would be a residual height of 7m which would be back to previous pollard points.

Works are for general upkeep and maintenance of the trees with a mindset on health and safety also. A fairly large branch has failed and has caught up within the crown which has prompted these works to be carried out.
